What To Do???

# Wildlife Die-Offs

Why?

Why Now??

What To Do???

# Wildlife Die-Offs

- Many go unnoticed

# Wildlife Die-Offs

- Notable exceptions

# Central Africa: Gorillas

# Human Health

## Gorillas: Ebola 2002

Death toll: 350 humans

Death toll: ~25% of gorillas

Critically endangered (IUCN, 2007)

<http://www.ifrc.org/en/nouvelles/nouvelles/africa/congo-republic-of/ebola-still-lurks-in-congos-cuvette-region/>

**Ebola death toll keeps climbing in Congo**  
BRAZZAVILLE (Reuters) - Nearly 90 people have been killed by the Ebola virus in the remote forests of Congo Republic since the latest outbreak of the disease hit the central African country just over a month ago.

# The Economy and Visibility

## SRW: 2007-2015

# Amur Tiger: Russia 1966-2012

# What to Do?

- Do nothing
  - Cheap
  - Avoid risks or complications of intervention

But...

- Continued risk of disease outbreak
- Don't identify risks to other species (humans)
- No benefit to local/regional/global communities

# What to Do?

- Do Something

# Detection

- Optimizing detection
  - Monitoring/surveillance systems
  - Historical baseline

# Mongolian Gazelle

# Detection

- Networks
  - Biologists
  - Citizen science networks
  - Local or national programs

# Generic Plan – First Steps

- Safety first
  - Relevant vaccinations
  - Biosecurity/prevent unintended disease spread
  - PPE
- Expect the unexpected
- Managing logistical, environmental challenges

# Communication and Responsibility

- Communication trees and plans
  - Internal & external: media, public, public health, gov't, NGO's
  - Scientific (data sharing during and after) vs lay
  - Identification of communication leads
- Who's responsible
  - Jurisdictional control of wildlife
  - Jurisdictional control for high consequence/OIE reportable diseases

# On the Ground – Data Collection

- Observational data – if missed...
  - Environmental
  - Necropsy
  - Photography
  - Data collection

# On the Ground - Samples

- Scope/scale (must be practical)
- Logistical/environmental constraints
- Administrative authorizations
- Short and long-term storage plans

# Getting Answers

## Routine Diagnostics

- Pakistan: 1996 -2006 Blue sheep

# Getting Answers Advanced Diagnostics

- Tajikistan: Markhor 2010  
*Mycoplasma capricolum*

# Mitigation Options

- Vaccination

- Captive breeding & reintroduction

# Reporting and Rigor

- Reporting
  - Interim and final
  - When, what, where, who, how (forum)
- Independent scientific review panel

# Conclusions

- It is difficult to predict the circumstances under which diseases may pose a problem
- Management strategies for disease outbreak are not well established
- Techniques for preventing disease outbreaks in wildlife are few and poorly developed
- There is usually little funding, political will and time for testing ideas and then putting them into practice

# Thank You
