

CMS

2025 CMS National Report

Deadline for submission of the National Reports: : 30 September 2025

Reporting period: from May 2023 to February 2025

Parties are encouraged to respond to all questions and are also requested to provide comprehensive answers, when required.

National Report format is available through the CMS Family Online Reporting System (ORS), which has been successfully implemented and used by CMS, AEWA, IOSEA and Sharks MOU in collaboration with UNEP-WCMC.

Through Resolution 12.5 (Rev. COP14) and Decisions 14.27, 14.25 National Reports and 14.2 Samarkand Strategic Plan for Migratory Species, the Standing Committee and the Secretariat were tasked with developing a new format for National Reports that aligns with the SPMS. However, given that the indicators of the SPMS are not yet in place, and due to the time constraints caused by the exceptionally short intersessional period before COP15, there is insufficient time to substantially amend the National Report format to fully align it with the SPMS.

The Standing Committee therefore agreed to develop a new format for the reporting period after COP15, and to use the previous National Report format for the current reporting period, with only minor adjustments. These adjustments would include a limited number of additional questions on topics that COP14 specifically requested to be reported through National Reports.

Additionally, it was agreed not to attach the full list of species in Appendices I and II for verification by Parties, as this information was collected during previous reporting cycles but could not be fully assessed and reflected in the National Reports format due to a lack of resources. Instead, the Standing Committee agreed to collect information on Range States for species listed in the Annex to Resolution 14.19 during this reporting cycle, in accordance with Decision 14.234.

A proposal of the National Reports format was circulated by the Secretariat to the Standing Committee members on 13 December and it was agreed through communication procedure, in line with Rule 5 of the Rules of Procedure.

This online version of the format strictly follows the one adopted by Standing Committee through communication procedure. In addition, as was also the case for reporting prior to COP14, it incorporates pre-filled information, notably in Sections II and III, based on data available at the Secretariat from the previous reporting cycles.

Please note that guidance is available for a number of questions throughout the national report as both in-text guidance and as tool tips (displayed via the information 'i' icon).

For any question, please contact Mr. Aydin Bahramlouian, Public Information Officer, aydin.bahramlouian@un.org

NOTICE: Before clicking on the hyperlinks in this questionnaire, please keep pressing the **Ctrl button** on your keyboard to open the link in a new tab.

RESOURCES FOR THE CMS NATIONAL REPORT FROM OTHER RELEVANT INTERGOVERNMENTAL PROCESSES

Convention/Agreement/Process

Information source

Convention on Biological Diversity (CBD)

National Reports

Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES)

Annual trade reports, Annual illegal trade reports, Implementation reports

Convention on Wetlands of International Importance especially as Waterfowl Habitat

National Reports, Ramsar Information Sheets

Food and Agriculture Organization of the United Nations (FAO)

Country reports

United Nations Convention to Combat Desertification (UNCCD)

National Reports

United Nations Forum on Forests (UNFF)

National Reports

United Nations Framework Convention on Climate Change (UNFCCC)

National Communications, Biennial Reports, Update Reports

Various CMS Family Agreements and Memorandums of Understanding (MOUs)

National Reports

2030 Agenda for Sustainable Development and the Sustainable Development Goals

National Reports

Note: These reporting processes of other relevant intergovernmental frameworks are examples of information resources to be used when filling out this national report, which may assist in identification and strengthening of synergies among these processes. This list is **not** exhaustive. There are many other sources of information that may also be of relevance for migratory species, their habitats and migrations systems.

High-level summary of key messages

In your country, during the reporting period, what does this report reveal about:

Guidance:

This section invites you to summarise the most important positive aspects of CMS implementation in your country and the areas of greatest concern. Please limit this specifically to the current reporting period only.

Your answers should be based on the information contained in the body of the report: the intention is for this section to distil the technical information in the report into “high level” messages for decision-makers and wider audiences.

Please try also to be specific or provide specific examples where you can, e.g. “New wildlife legislation enacted in 2024 doubled penalties for poisoning wild birds” rather than “stronger laws”; “50% shortfall in match-funding for GEF project on gazelles” rather than just “lack of funding”.

The most successful aspects of implementation of the Convention? (List up to five items):

- >>> (1) Improved legislation such as Law (7) of 2022 Regarding the Environment
- (2) Mangrove Planting Project which is increasing mangrove cover and habitats for migratory species.

The greatest difficulties in implementing the Convention? (List up to five items):

- >>> Capacity building needs including methods to record and monitor population abundance and migratory patterns.

The main priorities for future implementation of the Convention? (List up to five items):

- >>> 1) Establish a monitoring system to assess the conservation status of the species and habitats
- 2) Create an inventory of critical habitats for migratory species in the country
- 3) Improve the community outreach and awareness raising programs

I. Administrative Information

Name of the Party

>>> The Kingdom of Bahrain

Date of entry into force of the Convention in your country (DDMMYY)

>>> 01/03/2022

Any territories which are excluded from the application of the Convention

>>> None

Report compiler

Name and title

>>> Ms. Jawaher Bunajma , Environmental Specialist

Full name of institution

>>> The Supreme Council for Environment

Telephone

>>> +973 17386961

Email

>>> jbunajma@sce.gov.bh

Designated CMS National Focal Point

Name and title of designated Focal Point

>>> Mr. Ali Mansoor, Head of Registration and Permissions Group, Endangered Species Trafficking Section, Biodiversity Directorate

Full name of institution

South Andean Huemul	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Southern South American Grassland Birds	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Wadden Sea Seals	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
West African Elephants	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Western African Aquatic Mammals	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

III. Species on the Convention Appendices

III.1 Please confirm that the Excel file “Res. 14.19 species per Party” linked below correctly identifies the **Appendix II** species listed in Resolution 14.19 Guidance on the treatment of species included within aggregated families listed under Appendix II for which your country is a Range State.

The list of Resolution 14.19 species per Parties is available **here**.

Notice: Before clicking on the above hyperlink, please keep pressing the **Ctrl button** on your keyboard to open the link in a new tab.

GUIDANCE TIP:

During the last two reporting cycles, information has been collected on Appendix I and Appendix II species, and the information received still needs to be analyzed. Therefore, this reporting cycle only focuses on bird species identified under Resolution 14.19. This Resolution invites Parties to consider the list of Species in its Annex when preparing National Reports. This question aims at collecting information on Range States of species listed in the Annex to Resolution 14.19. Parties are therefore invited to review the Range State data which are available in the excel spreadsheet “Res. 14.19 species per Party”. Please confirm that the list is correct, or if amendments are needed, create a line for each species for which you wish to indicate different information from that shown in the Excel spreadsheet. Where possible, please also provide supporting evidence, such as a reference to a scientific paper. A more detailed spreadsheet with Data per countries and territories is available here as background information. The data used for these spreadsheets are based on the CMS standard references for non-passerine and passerine species, as determined by Resolution 12.27(Rev.COP14) Taxonomy and Nomenclature, using its online version HBW-BirdLife Version 9.0 (October 2024)..

No, amendments are needed for the following species:

Great Snipe / Gallinago media

Select occurrence of Great Snipe / Gallinago media

Not present

Provide evidence (optional)

>>> gallinago media is very rare into western Arabia and has nit been recorded in Bahrain

Redwing / Turdus iliacus

Select occurrence of Redwing / Turdus iliacus

Not present

Provide evidence (optional)

>>> Vagrant with one record in 1971

IV. Legal Prohibition of the Taking of Appendix I Species

IV.1. Is the taking of Appendix I species prohibited by national or territorial legislation in accordance with CMS Article III(5)?

Yes for all Appendix I species

Please identify any change in the legal statute(s) concerned that has been introduced since the last reporting:

Please provide links and clearly identify the relevant statute(s) by providing the title, date, etc.

>> Yes. Under Resolution No. 3 of 2003, Bahrain prohibits the hunting of all species of sea cows, marine turtles, and dolphins. Article 74 of Law No. 7 of 2022 on the Environment further mandates the protection of all native, migratory, and breeding colonies of species. In addition, Bahrain is working on formulating a list of species that are banned from hunting, and it already prohibits the hunting of all Appendix I species within its territory.

You have attached the following documents to this answer.

[نفي فالدل و فحال سلا و رحب لارؤب - 2003 ةن سلا 3 رارق.pdf](#) - Resolution (3) of 2003 Regarding the Prohibition of the Hunting of All Species of Sea Cows, Marine Turtles and Dolphins

[Law 7 of 2022 - Regarding enviro.pdf](#) - of Law (7) of 2022 Regarding the Environment

IV.2 **Exceptions:** Where the taking of Appendix I species **is** prohibited by national legislation, have any exceptions been granted to the prohibition during the reporting period?

No

IV.4. Are any vessels flagged to your country engaged in the intentional taking of Appendix I species outside of your country's national jurisdictional limits (consistent with the definition of "Range State" in Article I of the Convention)?

No

V. Awareness

V.1. Please indicate the actions that have been taken by your country during the reporting period to increase people's awareness of the values of migratory species, their habitats and migration systems (note that answers given in section XVIII may also be relevant).
(select all that apply)

GUIDANCE TIP:

Awareness raising may include actions, steps, programmes, initiatives and/or activities described in various CMS documents, such as Resolution, Res. **11.9 (Rev.COP13)** (World Migratory Bird Day), as well as a number of other resolutions and decisions which include specific provisions about awareness raising, including Resolutions Res. **13.6** (Insect Decline), Res. **14.18** (Avian Influenza), Res. **14.17** (Communities and livelihoods), Res. **14.16** (Ecological Connectivity), Res. **14.15** (Action Plan to address aquatic Wild Meat Harvests), Res. **14.14** (CMS Jaguar Initiative), Res. **14.13** (Initiative for Central Asian Flyway), Res. **14.12** (Single Species Action Plan for the Angelshark (*Squatina squatina*) in the Mediterranean Sea), Res. **14.10** (Single Species Action Plan for the Atlantic Humpback Dolphin (*Sousa teuszii*)), Res. **14.8** (Conservation and sustainable management of seagrass ecosystems), Res. **14.5** (Reducing the risk of vessel strikes for marine megafauna), Res. **14.1** (Samarkand Strategic Plan for migratory species 2024 - 2032), Res. **12.6 (Rev.COP14)** (Wildlife health and migratory species), Res. **12.11 (Rev.COP14)** (Flyways), Res. **12.17** (Conservation and Management of Whales and their Habitats in the South Atlantic Region), Res. **12.19 (Rev.COP14)** (Endorsement of the African Elephant Action Plan), Res. **12.20** (Management of Marine Debris), Res. **12.21 (Rev.COP14)** (Climate Change and Migratory Species), Res. **12.25** (Promoting Conservation of Critical Intertidal and Other Coastal Habitats for Migratory Species), Res. **11.16 (Rev.COP14)** (The Prevention of Illegal Killing, Taking and Trade of Migratory Birds), Res. **11.17 (Rev.COP14)** (Action Plan for Migratory Landbirds in the African-Eurasian Region), Res. **11.24 (Rev.COP13)** (Central Asian Mammal Initiative), Res. **11.31 (Rev.COP14)** (Illegal and unsustainable taking of wildlife), Res. **8.12 (Rev.COP12)** (Improving the Conservation Status of Raptors and Owls in the African-Eurasian Region), and Decision 14.194 (Ecological Connectivity), Decision 14.54 (Marine Wildlife Watching) and Decision 14.223 (Impacts of Plastic Pollution on Aquatic, Terrestrial and Avian Species).

- Teaching programmes in schools or colleges
- Press and media coverage
- Community-based celebrations, exhibitions and other events
- Engagement of specific stakeholder groups
- Special publications

Impact of actions

V.3. Overall, how successful have these awareness actions been in achieving their objectives?
Tick one box

GUIDANCE TIP:

If the impact of awareness actions has been assessed by (for example) project evaluation studies or follow-up audience attitude surveys during the reporting period, those provide a basis for answering this question. If the assessment has involved any type of quantitative measure of the impact, please specify. It is recognized that such assessment studies may not always be available, in which case it is acceptable to base your answer on an informed subjective judgement. Alternatively, if there is genuinely no basis for forming such a judgement, please select "Unknown".

Question V.4 gives you the opportunity to explain the basis on which you have answered question V.3.

- Unknown

VI. Mainstreaming Migratory Species in Other Sectors and Processes

VI.1. Does the conservation of migratory species currently feature in any national or local strategies and/or planning processes in your country relating to development, poverty reduction and/or livelihoods?

Yes

Please provide details:

GUIDANCE TIP:

Please describe how CMS objectives are incorporated in other sectoral strategies such as transport, construction, agriculture, tourism, education, spatial planning, Sustainable Development Goals and other strategies.

>>> Bahrain's new Biodiversity Monitoring Action Plan (2026-2031) aligns with the Global Biodiversity Framework (GBF) and CMS objectives by focusing on improving migratory bird monitoring and expanding mangrove cover. Key targets include doubling mangrove areas and enhancing bird monitoring. To achieve this, Bahrain plans to adopt a national wetland policy supporting mangrove restoration, recruit bird specialists, conduct continuous mangrove monitoring, and build a national bird monitoring system integrated with regional migratory bird networks. This approach ensures effective conservation through cross-sector collaboration and data-driven management.

VI.2. Does your country integrate the 'values of migratory species and their habitats' in any other national reporting processes?

E.g. Agenda 2030, reporting for International Whaling Commission, CBD, EU Nature Directives, etc.

GUIDANCE TIP:

Responses to this question should be focused on the reporting processes of the country rather than on plans and regulations within the country. This question intends to understand if the values of migratory species and habitats are featured in other national reporting that your country participates in, such as reporting to other biodiversity MEAs, the International Whaling Commission, European Commission etc.

Yes

Please provide details:

>>> Yes, our country integrates the values of migratory species and their habitats in national reporting through the Ramsar Convention and the Convention on Biological Diversity. These frameworks help guide the conservation and sustainable management of important habitats and migratory species.

VI.3. Provide some examples of significant involvements (if any) of non-governmental organizations and/or civil society in the conservation of migratory species in your country.

>>> Raptor Rehab: An NGO focused on the rescue, rehabilitation, and release of birds of prey that require assistance, aiming to support the preservation and conservation of these species.

Independent Licensed Ringer: The only licensed bird ringer in Bahrain, dedicated to monitoring the migratory movements of various bird species for many years. He has also published a book on ringing techniques to support conservation efforts and raise awareness.

Bahrain Birding News: A group of citizens and residents in Bahrain who communicate with each other to photograph birds during migration seasons and share recordings and observations throughout the year to promote awareness and community involvement in bird monitoring.

VI.4. Provide some examples of significant involvements (if any) of the private sector in the conservation of migratory species in your country.

>>> Regarding Bahrain's national mangrove restoration project, it has been recognized that the restored mangrove areas serve as important resting and feeding sites for various migratory bird species. This project plays a crucial role in supporting biodiversity and the conservation of migratory species within the country.

The initiative benefits from the active support and collaboration of several prominent local private sector companies, including ALBA, GPIC, FOLATH, Gulf Bank, Bapco Energies.

Their contributions are vital in ensuring the sustainability and success of the restoration project, reflecting a strong commitment from the private sector towards environmental conservation and the protection of migratory species.

You have attached the following documents to this answer.

[IWC 2018 Report - Kingdom of Bahrain.pdf](#)

[IWC 2017 Report - Kingdom of Bahrain \(002\).pdf](#)

VI.5. Are legislation and regulations in your country concerning Environmental Impact Assessments (EIA) and Strategic Environmental Assessments (SEA) considering the possible impediments to migration, transboundary effects on migratory species, and of impacts on migratory patterns and migratory ranges?

GUIDANCE TIP:

Please refer to Resolution **7.2 (Rev.COP14)** (Impact Assessment and Migratory Species).

Yes

VI.6. To what extent have biodiversity and migratory species considerations been specifically integrated into national energy and climate policy and legislation?

GUIDANCE TIP

Please refer to Resolutions **12.21 (Rev.COP14)** (Climate Change and Migratory Species), Res. **11.27 (Rev.COP13)** (Renewable Energy and Migratory Species), Res. **10.11 (Rev.COP13)** (Power Lines and Migratory Birds), and Decision **14.207** (Renewable Energy and Migratory Species) for more information.

>>> Yes, Law No. 7 of 2022 regarding to environment is a comprehensive law that covers all environmental sectors, including considerations related to biodiversity and migratory species, which are closely linked to the energy and climate policies.

Regarding the power lines and electricity sector in Bahrain, it is characterized by the absence of overhead power lines, as all electrical cables are underground. This reduces negative impacts on migratory species and contribute to environmental sustainability and mitigation of risk

VII. Governance, Policy and Legislative Coherence

(SPMS Target 3: National, regional and international governance arrangements and agreements affecting migratory species and their migration systems have improved significantly, making relevant policy, legislative and implementation processes more coherent, accountable, transparent, participatory, equitable and inclusive.)

VII.1. Have any governance arrangements and agreements affecting migratory species and their migration systems in your country, or in which your country participates, resulted in improvements during the reporting period?

GUIDANCE TIP:

This question is intended to understand improvements in governance arrangements in your country, which may potentially include improvements in policy, legislation, governance processes, plans etc. Please also consider the guidance below in VII.2.

Yes

Please provide details:

>>> law (7) of 2022 Regarding the Environment has strengthened environmental protection measures in Bahrain and emphasized the importance of conserving migratory species and their habitats. In line with this, Bahrain is in the process of issuing a ministerial resolution to publish the country's first official list of species prohibited from being hunted, which includes both native migratory and resident species. This initiative represents a significant step toward enhancing legal protection for wildlife and supporting biodiversity conservation efforts in the Kingdom

To what extent have these improvements helped to make relevant policy, legislative and implementation processes more coherent, accountable, transparent, participatory, equitable and inclusive?

4. Major contribution

Please describe how this assessment was made

>>> The updating and strengthening of the law on the environment in the country, which specifically stipulates the protection of migratory species and their habitats, has provided clearer guidelines, stronger legal protections and specific consequences, all of which can contribute to an improved implementation process of protecting these species. The contribution has been assessed as partial due to the improvement being relatively new and recent (2022) and more time would be needed to assess the full extent of this policy improvement. Nevertheless, a strong legislation such as this is a backbone and catalyst for future protection measures.

VII.2. Has any committee or other arrangement for liaison between different government agencies/ministries, sectors or groups been established at a national and/or subnational level in your country that addresses CMS implementation issues?

GUIDANCE TIP:

There is no fixed model for what these arrangements may involve, and it is for each Contracting Party to decide what best suits its own circumstances. Examples could include a steering group that includes representatives of territorial administration authorities, a coordination committee that involves the lead government department (e.g. environment) working with other departments (e.g. agriculture, industry); a forum that brings together government and NGOs; a liaison group that links with business and private sector interests; a stakeholder forum involving representatives of indigenous and local communities; a coordination team that brings together the National Focal Points for each of the biodiversity-related MEAs to which the country is a Party (see also question VII.3); or any other appropriate mechanism.

These mechanisms may be specifically focused on migratory species issues, or they may address CMS implementation in conjunction with related processes such as NBSAP coordination, a National Ramsar Committee, etc.

The Manual for National Focal Points for CMS and its Instruments may be helpful in giving further context.

Yes

Please provide details:

>>> The National Biodiversity Steering Committee

VII.3. Does collaboration between the focal points of CMS and other relevant global or regional Conventions take place in your country to develop the coordinated and synergistic approaches described in paragraphs 29, 30 and 32 of **Res. 11.10 (Rev.COP14)** (Synergies and partnerships) and in paragraph 7 of **Res. 14.3** (Engagement in CBD processes including the Global Biodiversity Framework) ?

GUIDANCE TIP:

Relevant Conventions may include other global agreements such as biodiversity-related Conventions and Agreements, UNFCCC, UNCCD, as well as regional agreements, including CMS Agreements. Such collaboration may also be relevant

to aligning efforts related to the Kunming-Montreal Global Biodiversity Framework, the 2030 Agenda for Sustainable Development, the United Nations Decade on Ecosystem Restoration 2021-2030, and NBSAPs as described in **Dec. 14.6** (CMS Engagement in CBD Processes Including Global Biodiversity Framework) and **Res.8.18 (Rev.COP12)** (Integration of Migratory Species into NBSAPs and into On-going and Future Programmes of Work under CBD). Guidance documents for integrating considerations relevant to Migratory Species in NBSAPs are available at CMS website.

Yes

Please provide details:

>>> The focal points of these relevant global/regional Conventions are all under one entity (The Supreme Council for Environment, Biodiversity Directorate) which has allowed for synergy and awareness in the approaches being taken with regards to each convention to ensure synergy and co-ordination between goals and targets

VII.4. Has your country or any jurisdictional subdivision within your country adopted legislation, policies, initiatives or action plans during the reporting period that promote community involvement in conservation of CMS-listed species?

Yes

Please identify the legislation, policies, initiatives, or action plans concerned:

>>> Yes, the Supreme Council for Environment in Bahrain consistently promotes community involvement as a central element of its conservation efforts. Throughout the reporting period, the Council has engaged the public in several key initiatives, including the mangrove restoration program, which involves the active participation of volunteers, students, and local stakeholders in planting and caring for mangrove trees—critical habitats for many migratory species.

Additionally, the Council has started a community-based initiative to control the invasive Common Myna bird, working closely with farmers, volunteers, and local residents to mitigate the negative impacts of this species on native biodiversity. Public engagement has also been encouraged in the development and planned rollout of Bahrain's National Biodiversity Strategy and Action Plan (NBSAP), which integrates community participation as a foundational pillar for biodiversity conservation and sustainable development. These efforts reflect a strong commitment to inclusive environmental governance and the active role of society in achieving national and international conservation goals.

VIII. Incentives

VIII.1. Has there been any elimination, phasing out or reforming of harmful incentives in your country during the reporting period resulting in benefits for migratory species?

No, because no such incentives have existed

VIII.2. Has there been development and/or application of positive incentives in your country during the reporting period, resulting in benefits for migratory species?

Yes

Please indicate what measures were implemented and the time-periods concerned.

>>> The Supreme Council for Environment in Bahrain, in collaboration with relevant stakeholders, has been actively engaged in the development of a comprehensive project and action plan aimed at controlling and managing the invasive Common Myna bird species. This initiative is being implemented through strong community partnerships, with the active involvement of local farmers, volunteers, and trainees. The approach emphasizes raising public awareness, building local capacity, and encouraging participation from various segments of society. Environmentally sound and sustainable methods are being promoted to mitigate the negative impacts of this invasive species on native biodiversity, agricultural productivity, and migratory bird populations

IX. Sustainable Production and Consumption

IX.1. During the reporting period, has your country implemented plans or taken other steps concerning sustainable production and consumption which are relevant for conservation of migratory species?

Yes

Please describe the measures that have been planned, developed or implemented

>>> As part of its ongoing commitment to supporting the Sustainable Development Goals (SDGs) and promoting environmental sustainability, the Kingdom of Bahrain has established the Ministry of Sustainable Development, which is responsible for implementing sustainable projects aimed at achieving these objectives. During the reporting period, several areas have been studied for potential protection status to ensure that vital habitats are preserved and not lost to increasing urbanization and development pressures.

Furthermore, Bahrain's mangrove restoration project has been expanded to a national scale, with current efforts focused on quadrupling the country's mangrove cover. This initiative plays a critical role in promoting and enhancing habitats and resting sites for migratory species, contributing directly to biodiversity conservation.

In addition, Bahrain is in the process of finalizing and publishing its National Biodiversity Strategy and Action Plan (NBSAP) under the Global Biodiversity Framework (GBF). This strategy emphasizes sustainability and includes specific measures to conserve and support native migratory species, aligning national efforts with global biodiversity conservation targets.

Please describe what evidence exists to show that the intended results of these measures are being achieved.

>>> The Ministry of Sustainable Development, in collaboration with the Information & eGovernment Authority, has established the Monitoring and Reporting System for Sustainable Development Goals, known as MARS. (MARS is an electronic platform developed to track and measure progress toward achieving the Sustainable Development Goals (SDGs) in the Kingdom of Bahrain. The system aims to provide accurate and up-to-date data on SDG indicators, supporting informed decision-making to advance these goals. The Ministry has also coordinated with all government ministries to nominate focal points responsible for monitoring and reporting data related to the SDGs.

Within this framework, the Supreme Council for Environment plays a critical role, particularly in the implementation and oversight of SDG 14: Life Below Water and SDG 15: Life on Land. The Council maintains continuous monitoring and regulatory efforts concerning all environmental aspects of the SDGs, with a strong emphasis on the protection of migratory species and their habitats. This ensures that biodiversity conservation is integrated into national sustainable development strategies and that progress in these areas is effectively supported and evaluated.

X. Threats and Pressures Affecting Migratory Species; Including Obstacles to Migration

Which of the following pressures on migratory species or their habitats are having an adverse impact in your country on migratory species included in the CMS Appendices?

Guidance: This question asks you to identify the important pressures that are reliably known to be having an actual adverse impact on CMS-listed migratory species at present. Please avoid including speculative information about pressures that may be of some potential concern but whose impacts have not yet been demonstrated.

Please note that, consistent with the terms of the Convention, “in your country” may in certain circumstances include areas outside national jurisdictional limits where the activities of any vessels flagged to your country are involved.

Intentional Taking

GUIDANCE TIP:

Please note that as per Article 1(i) of the Convention, “Taking” means taking, hunting, fishing, capturing, harassing, deliberate killing, or attempting to engage in such conduct.

	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details	Overall relative severity of impact 1 = severe 2 = moderate 3 = low
Legal hunting	None	
Illegal hunting	Common kestrel / seagulls	2
Other harvesting and take	None	
Illegal trade	Common kestrel / seagulls	2
Deliberate poisoning	None	

What are the most significant advances that have been made since the previous report in addressing intentional taking?

>>> The Supreme Council for the Environment, in cooperation with the Ministry of Interior, has intensified monitoring efforts during the migration season. The Council has increased field visits to bird and animal shops across Bahrain. Work is currently underway on the first decision that will include a list of species prohibited from being hunted. Law No. (7) of 2022 explicitly stipulates the protection of migratory species.

What are the most significant negative trends since the previous report concerning intentional taking?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolutions **14.9** (Conservation Priorities for Cetaceans), Res. **14.15** (Action Plan to Address Aquatic Wild Meat Harvests in West Africa), Res. **13.3** (Chondrichthyan Species), Res. **13.4** (African Carnivore initiative), Res. **12.10 (Rev.COP14)** (Conservation of African-Eurasian Vultures), Res. **12.11 (Rev.COP14)** (Flyways), Res. **12.12 (Rev.COP14)** (Action Plans for Birds), Res. **12.15** (Aquatic Wild Meat), Res. **12.17** (Conservation and Management of Whales and their Habitats in the South Atlantic Region), Res. **12.19 (Rev.COP14)** (Endorsement of the African Elephant Action Plan), Res. **11.15 (Rev.COP14)** (Preventing Poisoning of Migratory Birds), Res. **11.16 (Rev.COP14)** (The prevention of Illegal Killing, Taking and Trade of Migratory Birds), Res. **11.17 (Rev.COP14)** (Action Plan for Migratory Landbirds in the African-Eurasian Region), Res. **11.18 (Rev.COP14)** (Saker Falcon Global Action Plan), Res. **11.21** (Single Species Action Plan for the Loggerhead Turtle in the South Pacific Ocean), Res. **11.22 (Rev.COP12)** (Live Capture of Cetaceans from the Wild for Commercial Purposes), Res. **11.24 (Rev.COP13)** (Central Asian Mammal Initiative), Res. **11.31 (Rev.COP14)** (Illegal and unsustainable taking of wildlife), and Decisions 14.148-14.150 (Conservation of African-Eurasian Vultures), 14.119-14.121 (Task Force on Illegal Killing, Taking and Trade of Migratory Birds in the Mediterranean), 14.125 (Asia Pacific Illegal Taking of Migratory Birds Intergovernmental Task Force), Decision 14.126 (South-West Asia Illegal Taking of Migratory Birds Intergovernmental Task Force).

>>> None

Unintentional Taking

	Overall relative severity of impact 1 = severe 2 = moderate 3 = low	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details
Bycatch		None
Catch in Abandoned, Lost or otherwise Discarded Fishing Gear (ALDFG)		None
Other forms of unintentional taking		None

What are the most significant advances that have been made since the previous report in addressing bycatch or catch in ALDFG?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolutions **12.22**(Bycatch), Res. **12.20** (Management of Marine Debris), Res. **11.21** (Single Species Action Plan for the Loggerhead Turtle in the South Pacific Ocean), Res. **14.9** (Conservation Priorities for Cetaceans), and Res. **13.3** (Chondrichthyan species) and Dec. 14.31 b) and c). Parties are encouraged to report on the implementation of the recommendation included in Drynan and Baker 2023 “Technical mitigation techniques to reduce bycatch of sharks” provided in Annex 1 to UNEP/CMS/COP14/Doc.27.1.1/Rev.1.

>>> In 2025, Bahrain intensified efforts to combat overfishing and protect marine species through new regulations setting minimum catch sizes for 18 species. The decision also emphasized the mandatory release of any protected or undersized marine species if caught, and inspection campaigns have been intensified in local markets to ensure compliance.

What are the most significant negative trends since the previous report concerning bycatch?

GUIDANCE TIP:

Please provide information on any significant trend in bycatch of CMS-listed species, notably those listed on App. I. Related to the guidance given on the overarching part of Question X.1, this is a key example where you are encouraged to think about activities outside national jurisdictional limits of any vessels flagged to your country (in addition to any other circumstances in which bycatch is a noteworthy pressure on relevant species).

>>> None.

Collisions and electrocution

	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details	Overall relative severity of impact 1 = severe 2 = moderate 3 = low
Wind turbines	None	
Other collisions	None	
Electrocution	None	
Vessel strikes	None	

What are the most significant advances that have been made since the previous report in addressing collisions and electrocution?

>>> Bahrain does not face issues related to electrocution, as the country relies on underground power lines. As for collisions, Bahrain conducts environmental impact assessments before initiating any projects to mitigate such risks.

What are the most significant negative trends since the previous report concerning collisions and electrocution?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolution **7.4** (Electrocution of Migratory Birds), **7.5 (Rev.COP12)**(Wind Turbines and Migratory Species, **10.11 (Rev. COP13)** (Power Lines and Migratory Birds), **11.17 (Rev.COP14)** (Action Plan for Migratory Landbirds in the African Eurasian Region), **11.27 (Rev.COP13)** (Renewable Energy and Migratory Species), **12.10 (Rev.COP14)** (Conservation of African Eurasian Vultures), Res. **14.5** (Reducing the risk of vessel strikes for marine megafauna), Res. **14.9** (Conservation Priorities for Cetaceans) and Decision 14.48.

>>> None

Other mortality

	Overall relative severity of impact 1 = severe 2 = moderate 3 = low	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details
Disease, including highly pathogenic avian influenza (HPAI)		None
Unexplained stranding events		None
Accidental/indirect poisoning		None
Disease		None

What are the most significant advances that have been made since the previous report in countering other mortality?

>>> Bahrain monitors, records, and investigates marine species mortality cases—such as fish kills, marine mammals, and turtles—to identify causes and support decision-making.

What are the most significant negative trends since the previous report concerning other mortality?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolutions **11.15 (Rev.COP14)** (Preventing Poisoning of of Migratory Species), Res. **12.6** (Rev.COP14) (Wildlife health and migratory species), Res. **13.4** (African Carnivore initiative), Res. **13.6** (Insect Decline), Res. **14.9** (Conservation Priorities for Cetaceans), Res. 14.18 Avian influenza and Decisions 14.148-14.150 (Conservation of African-Eurasian Vultures).

>>> None

Alien and/or invasive species

	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details	Overall relative severity of impact 1 = severe 2 = moderate 3 = low
Alien and/or invasive species	Myna , Indian crow	2

What are the most significant advances that have been made since the previous report in addressing alien and/or invasive species?

>>> Bahrain is in the process of publishing the first blacklist of alien invasive species in the Kingdom of Bahrain. The country has already initiated a national project to combat the invasive myna species, in collaboration with stakeholders from other ministries within the Kingdom.

What are the most significant negative trends since the previous report concerning alien and/or invasive species?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolution **11.28** (Future CMS Activities related to Invasive Alien Species).

>>> None

Disturbance and disruption

	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details	Overall relative severity of impact 1 = severe 2 = moderate 3 = low
--	--	--

Disturbance	None	
-------------	------	--

What are the most significant advances that have been made since the previous report in addressing disturbance & disruption?

>>> None

What are the most significant negative trends since the previous report concerning disturbance and disruption?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolutions **14.9** (Conservation Priorities for Cetaceans), Res. **12.16 (Rev.COP14)** (Recreational In-Water Interaction with Aquatic Mammals), Res. **11.29 (Rev.COP12)** (Sustainable Boat-based Wildlife Watching), Res. **13.4** (African Carnivore initiative) and measures to mitigate threats to Important Shark and Ray Ares under Decision **14.61**.

>>> None

Pollution

	Species/species groups affected (provide names and indicate whether Appendix I and/or Appendix II); and any other details	Overall relative severity of impact 1 = severe 2 = moderate 3 = low
Marine debris (including plastics)	Marine species in general	3
Light pollution	None	
Underwater noise	None	
Other pollution	None	
Fish aggregating devices (FADs)	None	

What are the most significant advances that have been made since the previous report in addressing pollution?

>>> Bahrain continuously works on cleaning the sea and coastlines, including regular beach cleanups, raising awareness, and encouraging community partnerships. In addition, Bahrain has issued Ministerial Decision No. (14) of 2022, banning the manufacture, import, and circulation of single-use plastic bags less than 35 microns thick.

What are the most significant negative trends since the previous report concerning pollution?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolutions **14.9** (Conservation Priorities for Cetaceans), Res. **13.5 (Rev.COP14)** (CMS international light pollution guidelines for migratory species), Res. **12.14** (Adverse Impacts of Anthropogenic Noise on Cetaceans and Other Migratory species), Res. **12.17** (Action Plan for the Protection and Conservation of south Atlantic Whales), Res. **12.20** (Management of Marine Debris), Res. **7.3 (Rev.COP12)** (Oil Pollution and Migratory species), and Decision **14.223** (Impacts of Plastic Pollution on Aquatic, Terrestrial and Avian Species).

>>> None

Habitat destruction/degradation

	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details	Overall relative severity of impact 1 = severe 2 = moderate 3 = low
Landscape fragmentation/loss of ecological connectivity, physical barriers	None	
Habitat degradation	None	

Mineral exploration/extraction	None	
Unsustainable land/resource use	None	
Urbanization	Birds	3
Mineral exploration/extraction, incl. deep-seabed mineral exploitation	None	
Fire	None	
Physical barriers	None	

Climate change

	Overall relative severity of impact 1 = severe 2 = moderate 3 = low	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details
Climate change		

What are the most significant advances that have been made since the previous report concerning climate change?

>>> Bahrain is working on projects to mitigate the effects of climate change. These initiatives aim to reduce environmental impact and promote a sustainable future for the country

What are the most significant negative trends since the previous report concerning climate change?

GUIDANCE TIP:

Significant advances may include efforts, actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Decision **14.211** (Climate change and Migratory Species).

>>> None.

Levels of knowledge, awareness, legislation, management etc.

	Overall relative severity of impact 1 = severe 2 = moderate 3 = low	Species/species groups affected (please provide names and indicate whether Appendix I and/or Appendix II); and any other details
Inadequate transboundary management		None
Inadequate legislation		None
Lack of knowledge	3	Birds
Inadequate enforcement of legislation		None

What are the most significant advances that have been made since the previous report in levels of knowledge, awareness, legislation, management etc?

>>> Bahrain organizes many workshops and awareness lectures about wildlife, migratory species, and invasive alien species. These activities target all segments of society, from school students to associations and the general public.

What are the most significant negative trends since the previous report concerning levels of knowledge, awareness, legislation, management etc.?

>>> None.

What are the most significant advances that have been made since the previous report in other pressures?

>>> None.

What are the most significant negative trends since the previous report concerning other pressures?
>>> None

During the reporting period, has your country adopted new legislation or other domestic measures in response to CMS Article III(4) (b) specifically addressing obstacles to migration?
CMS Article III(4)(b) states 'Parties that are Range States of a migratory species listed in Appendix I shall endeavor...to prevent, remove, compensate for or minimize, as appropriate, the adverse effects of activities or obstacles that seriously impede or prevent the migration of the species.'

GUIDANCE TIP:

This question is intended to specifically report on any new legislation or domestic measures **addressing obstacles to migration**. Relevant information would not include general conservation measures.

No

XI. Conservation Status of Migratory Species

XI.1. What (if any) major changes in the conservation status of migratory species included in the CMS Appendices (e.g. national Red List category changes) have been recorded in your country during the reporting period?

“Conservation status” of migratory species is defined in Article I(1)(b) of the Convention as “the sum of the influences acting on the migratory species that may affect its long-term distribution and abundance”; and four conditions for conservation status to be taken as “favourable” are set out in Article I(1)(c).

If more rows are required, please upload an Excel file detailing a longer list of species.

GUIDANCE TIP:

The emphasis of this question is on “major changes” during the reporting period. Information is expected to be provided here only where particularly notable shifts in status have occurred, such as those that might be represented by a re-categorisation of national Red List threat status for a given species (or subspecies, where relevant). Please record if any CMS listed species has become extinct or extirpated from your country - or reintroduced/re-established/established - during the reporting period (or before if not previously reported to CMS).

Please note also that you are only being asked about the situation in your country. Information about global trends, and global Red List reclassifications etc, will be communicated to the CMS via other channels outside the national reporting process.

Terrestrial mammals (not including bats)

	Change in status (including time period concerned)	Comments	Source reference	Species/subspecies (indicate CMS Appendix where applicable)

Aquatic mammals

	Change in status (including time period concerned)	Comments	Source reference	Species/subspecies (indicate CMS Appendix where applicable)

Fish

	Change in status (including time period concerned)	Comments	Source reference	Species/subspecies (indicate CMS Appendix where applicable)

XII. Cooperating to Conserve Migration Systems

XII.1 During the reporting period, has your country initiated or participated in the development of any proposals for new CMS Agreements, including Memoranda of Understanding, to address the needs of Appendix II species?

E.g. Developments following the advice in Resolutions **12.8** and **13.7**.

Yes

Please provide details:

>>> Proposals have been prepared to assess the signing of the Sharks and Raptors MoU

XII.2. During the reporting period, have actions been taken by your country to encourage non-Parties to join CMS and its related Agreements?

Yes

Please specify which countries have been approached:

Kuwait

Qatar

XII.3. During the reporting period, has your country participated in the implementation of Concerted Actions under CMS (as detailed in Resolution **12.28 (Rev.COP14)**) to address the needs of relevant migratory species?

Yes

Please describe the results of these actions achieved so far:

GUIDANCE TIP:

If any progress report on implementation of Concerted Actions has been submitted to the COP and/or the Scientific Council in the period under consideration, Parties can refer to that report rather than restating the same information in replying to this question (please indicate the document number)

>>> Migratory Species (CMS) to combat the illegal taking of migratory birds in Southwest Asia. The initiative brings together ten countries—including Bahrain—to coordinate on reviewing wildlife laws, implementing the South-West Asia Action Plan against Illegal Killing and Taking of Birds (IKB), enhancing enforcement, and sharing best practices to protect endangered species.

XII.4. Have any other steps been taken which have contributed to enhancing cooperation on the conservation of migratory species in ways that fully reflect a migration systems approach?

E.g. steps implementing Resolutions **12.11 (Rev.COP14)** (Flyways) and Res. **12.17** (South Atlantic Whales), and Decisions 14.130 (Action Plan for Migratory Landbirds), 14.137 (Flyways), and 14.207 (Renewable Energy and Migratory Species).

No

XII.5. Has your country mobilized resources and/or taken steps to promote and address ecological connectivity and its functionality in relevant international processes?

E.g., Kunming-Montreal Global Biodiversity Framework, 2030 Agenda for Sustainable Development, United Nations Decade on Ecosystem Restoration 2021-2030, etc.

GUIDANCE TIP:

Please describe initiatives aimed at implementing Decision 14.194.

Yes

Please provide details:

>>> The Kingdom of Bahrain is working to update its National Biodiversity Strategies and Action Plans in accordance to the Post-2020 Global Biodiversity Framework

XIII. Area-Based Conservation Measures

XIII.1. Have critical habitats and sites for migratory species been identified (e.g. by an inventory) in your country?

GUIDANCE TIP:

The CMS does not have a formal definition of what constitutes a “critical” site or habitat for migratory species. It is left to report compilers to work with any interpretations which may be in existing use at national level, or to use informed expert judgement.

Helpful reflections on the issue can be found in the Resolution **Res. 14.16** (Ecological Connectivity) and in “**Strategic Review of Aspects of Ecological Networks relating to Migratory Species**” presented to COP11 and the “**Critical Site Network Tool**” developed under the auspices of AEWA and the Ramsar Convention. For sharks and rays please refer to <https://sharkrayareas.org>. For marine mammals, please refer to <https://www.marinemammalhabitat.org/imma-eatlas/>.

Partially - to a large extent

What are the main gaps and priorities to address, if any, in order to achieve full identification of relevant critical habitats and sites?

>>> One of the main gaps is the need for capacity building. Strengthening technical expertise, training personnel, and improving data collection and monitoring systems are essential to fully identify and manage critical habitats and sites for migratory species.

XIII.2. Has any assessment been made of the contribution made by the country’s protected areas network specifically to migratory species conservation?

Partly / for some areas

Please provide details:

GUIDANCE TIP:

The “contribution” may relate to habitat types, and/or geographical coverage/distribution factors, and/or coverage of particular priority species or species groups, and/or factors concerning functional connectivity, and/or any other factor considered relevant to the conservation of migratory species.

The “contribution” may relate to the use of the identified **Important Marine Mammal Areas (IMMAs)** (www.marinemammalhabitat.org) and support to identification of new **Important Shark and Ray areas (ISRAs)** (<https://sharkrayareas.org>).

Regarding Birds of Prey, the “contribution” may relate to the Internationally Important Raptors Sites (relevant to the range of the Raptors MOU, as sites listed in table 3 of Annex 3 of the Raptors MOU).

(If you have information on assessments of management effectiveness, please do not include that here, but provide it instead in your response to question XIII.4).

>>> All protected areas in the Kingdom of Bahrain have been established based on several factors, including the presence of native species, whether migratory or non-migratory. Therefore, the protected areas network directly contributes to the conservation of migratory species.

XIII.3. Has your country adopted any new legislation or other domestic measures in the reporting period in response to CMS Article III(4) (a) (“Parties that are Range States of a migratory species listed in Appendix I shall endeavor ... to conserve and, where feasible and appropriate, restore those habitats of the species which are of importance in removing the species from danger of extinction”)?

Yes

Please give the title or other reference (and date) for the measure concerned:

>>> Yes, during the reporting period, Bahrain announced the establishment of a new protected area called Al Buhair Nature Reserve, which represents an important step towards conserving habitats used by some migratory species. This initiative contributes to the implementation of Article III(4)(a) of the CMS by protecting and, where feasible, restoring habitats that are important for species at risk of extinction.

XIII.4. In respect of protected areas in your country that are important for migratory species, have any assessments of management effectiveness been undertaken in the reporting period?

Partly / for some areas

XIII.5. Beyond Protected Areas, are other effective area-based conservation measures implemented in your country in ways which benefit migratory species?

No

XIV. Ecosystem Services

XIV.1. Has any assessment of ecosystem services associated with migratory species been undertaken in your country since the last reporting?

GUIDANCE TIP:

The phrase “associated with” migratory species allows you to report on any assessments that cover ecosystem services of systems, habitats or species assemblages that include migratory species. The question is therefore not expecting you to limit this to assessments focused solely on one or more migratory species.

For a broader biodiversity assessment to be relevant here, the migratory species involved must be making some identifiable contribution to the ecosystem services concerned.

Yes

Please provide details (including source references where applicable):

>>> Yes, the presence of migratory birds in mangrove plantation areas directly contributes to eco-tourism. The Kingdom of Bahrain has supported youth-led companies to promote eco-tourism in the country, highlighting the important ecosystem services provided by migratory species.

XV. Safeguarding Genetic Diversity

XV.1. Are strategies of relevance to migratory species being developed or implemented to minimize genetic erosion of biodiversity in your country?

GUIDANCE TIP:

Strategies to be considered under this section do not necessarily have to specifically address migratory species but be of sufficient relevance in relation to the objective of safeguarding the genetic diversity of wild populations.

Yes

Please select the relevant strategies (select all that apply):

Captive breeding and release

Please describe the captive breeding & release strategy:

>>> Since 2013, Bahrain has been actively engaged in breeding and releasing the Asian houbara bustard (*Chlamydotis macqueenii*) into the wild. This initiative aims to bolster the local population of this species. Bahrain is planning to conduct genetic studies on certain bird species next years to better understand their genetic makeup and support future conservation efforts.

XVI. National Biodiversity Strategies and Action Plans

XVI.1. Does your country's National Biodiversity Strategy or Action Plan (NBSAP), or other relevant plans or strategies used in your country, explicitly address obligations under CMS, priorities for the conservation and management of migratory species, their habitats and migration systems, and ecological connectivity?

Yes

a. Please provide a link to or attachment of the strategy/action plan

>>> 2026-2031 action plan has been prepared but not published yet.

b. Please identify the elements in the plan/strategy that are particularly relevant to migratory species, and highlight any specific references to the CMS/CMS instruments

GUIDANCE TIP:

Specify page numbers, section/paragraph numbers etc., where possible.

>>> The Kingdom of Bahrain has developed a National Biodiversity Action Plan for the period 2026–2031 as part of its commitments under the Convention on Biological Diversity (CBD). The plan comprises 23 targets and corresponding actions, some of which specifically aim to protect migratory species and their associated natural habitats. It will be shared once it is officially published.

XVII. Traditional Knowledge, Innovations and Practices of Indigenous and Local Communities

In the absence of a national definition of 'indigenous and local communities', please refer to the Convention on Biological Diversity document **Compilation of Views Received on Use of the Term "Indigenous Peoples and Local Communities"** for helpful guidance on these terms.

XVII.1. During the reporting period, have actions been taken in your country to foster consideration for the traditional knowledge, innovations and practices of indigenous and local communities that are relevant for the conservation and sustainable use of migratory species, their habitats and migration systems?

Yes

XVII.2. During the reporting period, have actions been taken in your country to promote and foster effective participation and involvement of indigenous and local communities in the conservation and sustainable use of migratory species, their habitats and migration systems?

Yes

If 'yes' or 'partly/in some areas' to either of the preceding two questions, please select which actions have been taken:

(select all that apply)

Inclusion in governance mechanisms (legislation, policies, etc.)

Please provide details on the implementation of the actions concerned.

GUIDANCE TIP

Responses to these questions may involve actions, steps, programmes, initiatives and/or activities described in CMS documentation, such as Resolution **14.9** (Conservation Priorities for Cetaceans).

>>> During the reporting period, Bahrain has taken actions to recognize and support traditional knowledge and practices relevant to migratory species conservation. Notably, the Supreme Council for Environment issued a new decision concerning Bahraini fishermen, aiming to integrate their traditional fishing knowledge and sustainable practices into conservation efforts. This decision helps ensure that the livelihoods of local communities are preserved while promoting the sustainable use of marine and migratory species and their habitats.

XVII.3. How would you rank progress since the previous report in your country in the area of traditional knowledge innovations and practices of indigenous and local communities relevant for the conservation and sustainable use of migratory species?

3. Positive advances have been made

Please provide details on the progress made (where applicable).

>>> Since the previous report, progress in the area of traditional knowledge, innovations, and practices of indigenous and local communities relevant to the conservation and sustainable use of migratory species is at an early stage. The recent decision by the Supreme Council for Environment reflects initial steps towards recognizing and integrating traditional practices, but more time is needed to fully assess its impact.

XVIII. Knowledge, Data and Capacity-Building

XVIII.1 During the reporting period, which steps taken in your country have contributed to the achievement of the results defined in the area of knowledge, data and capacity building? (Answers given in Section V may be relevant)

(select all that apply)

- Education campaigns in schools
- Public awareness campaigns
- Capacity building

XVIII.2 Please describe the contribution these steps have made towards achieving the results defined in Target 15:

GUIDANCE TIP

Steps taken may include actions, programmes, initiatives and/or activities described in CMS documentation, such as Resolutions **14.9** (Conservation Priorities for Cetaceans), Res. **13.3** (Chondrichthyan Species), Res. **13.4** (African Carnivore initiative), Res. **13.5 (Rev.COP14)** (CMS international light pollution guidelines for migratory species), Res. **13.6** (Insect Decline), and Decisions 14.130/14.131 (AEMLAP), 14.134 (Preventing Poisoning of Migratory Birds), 14.148-14.151 (Conservation of African-Eurasian Vultures), Decisions 14.207-14.208 (Renewable Energy and Migratory Species), and 14.182 (Illegal and Unsustainable Taking of Wildlife).

Education campaigns in schools

>>> Bahrain regularly conducts awareness lectures for school students at all educational levels, focusing on wildlife, migratory species, invasive alien species, and the role of students in protecting biodiversity.

Public awareness campaigns

>>> Awareness sessions are also organized for employees of various government institutions, private companies, and civil society organizations. These initiatives aim to promote environmental responsibility and encourage the active participation of all sectors of society in conserving natural ecosystems and species.

Capacity building

>>> Bahrain has launched a bird monitoring program, which was officially adopted this year under the leadership of a local bird expert. The program includes training members of the Supreme Council for Environment on monitoring techniques, species identification, and data collection.

XVIII.3 What assistance (if any) does your country require in order to build sufficient capacity to implement its obligations under the CMS and relevant Resolutions of the COP?

(select all that apply)

- Funding support
- Technical assistance
- Education/training/mentoring
- Other skills development
- Provision of equipment or materials
- Exchange of information & know-how
- Research & innovation

XIX. Resource Mobilization

XIX.1 During the reporting period, has your country made financial or other resources available for conservation activities specifically benefiting migratory species?

GUIDANCE TIP:

The “resources” that are relevant here can be financial, human or technical. In addition to funding, “in-kind” forms of support such as staff time or administrative infrastructure could be relevant, as could the loan of equipment, provision of data processing facilities, technology transfer, training or mentoring schemes and other initiatives for capacity building.

No

XIX.2. During the reporting period, has your country received financial or other resources for conservation activities specifically benefiting migratory species?

No

XIX.3. Which are the most important CMS implementation priorities requiring resources and support in your country during future reporting periods?

GUIDANCE TIP:

Please consider answers provided in HLS.3 when answering this question where appropriate, as they may be of relevance.

>>> Bahrain has recently signed to CMS (2022) and capacity building on the implementation of the new strategic plans is needed
