V. Policies on Satellite Telemetry

1	In the current reporting period, has your country undertaken conservation/research projects that use satellite telemetry? If Yes, please provide details (Indicate inter alia the scientific justification for the research, describe briefly the measures taken to ensure that risks to the welfare of individual animals and – in the case of severely depleted populations – to the species are minimised, and summarise the results obtained):	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	<p style="color: blue;">A total of 12 light-bellied brent geese have been followed on migration to their breeding grounds in 1997 and 2001. The aim of the project has been to identify unknown staging areas/staging behaviors of this endangered fly-way population of geese. The study has been highly successful in demonstrating a hitherto unknown linkage between Greenland and Svalbard breeding brent geese, and by identifying important staging areas in the western parts of Spitsbergen. The attachment method used cause transmitters only to temporarily stay on the birds. The method had previously been tested on other goose species, and was considered harmless to the birds behaviour and migratory abilities. Indeed all transmitter-marked light-bellied brent geese survived the catch, handling and tracking, and returned to the wintering areas the following winter.</p>	
2	Are any future conservation/research projects planned that will use satellite telemetry? If Yes, please provide details (including the expected timeframe for these projects):	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No
	<p style="color: blue;">The Department of Coastal Zone Ecology of the National Environmental Research Institute hopes in the near future to be able to satellite-track black scooters and pintail. The aim of the projects will be to improve our understanding of the exact breeding locations and potential stop-over use of black scooters wintering in Denmark, and exact wintering locations of pintail staging in Denmark autumn and spring. Both or related species has been subject to several successful tracking studies in North America. The time-frame is uncertain, because the projects awaits funding.</p> <p>If No, please explain any impediments or requirements in this regard:</p>	

VI. Membership

---	--	---

	<p>If Yes, please provide details. (In particular, describe actions taken to recruit the non-Parties that have been identified by the Standing Committee as high priorities for recruitment.)</p> <p>It is a primary goal in the Danish international assistance strategy to support the ratification and implementation of international nature protection related agreements and conventions. More specific efforts have been made with the Baltic and East European States, Thailand and Malaysia.</p>

than the CMS Secretariat for conservation activities having direct benefit for migratory species in your country?

If Yes, please provide details:

The EU-Commission has supported the restoration of about 10 large nature areas with direct benefits for migratory species.

IX. Implementation of COP Resolutions and Recommendations

Please summarize the measures undertaken by your country to implement the substantive, operational Resolutions and Recommendations adopted by the Conference of the Parties, where these have not been mentioned elsewhere in this report, giving particular emphasis to those adopted by at the Sixth Meeting (Cape Town, November 1999).

Resolution 6.2 By-catch: In order to reduce by-catch of the Harbour Porpoise *Phocoena phocoena* an action plan has been elaborated, among others including investigations on the size of the by-catch and the use of “pinger” on certain types of gill nets in the North Sea.
