Migratory Soaring Birds
Sensitivity Map: Wind Energy

Elat Mountains Region

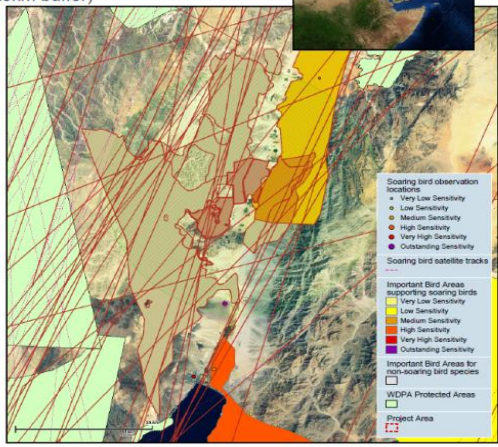

TARGET SUMMARY (centroid: E35.027 N29.831 with 20km buffer)

Maximum Sensitivity: Outstanding (126 37009272765)

18 soaring bird species observed while a further 15 soaring bird species are thought to occur in this area.
 1 soaring bird observation locations.
 2 IBAs supporting soaring birds plus a further 0 IBAs for non-soaring bird species.
 9 protected sites.
 24 satellite tracked migratory routes.
 Countries: Jordan, Israel, Egypt

This map illustrates locations of records (collected by BirdLife International) for soaring birds within the user defined search area. Locations are coloured by their sensitivity to potential wind energy development, based on their importance for soaring birds. Please note that the available information for this region is incomplete; areas with no data should not be interpreted to be of low sensitivity to potential wind energy development. An appropriate environmental impact assessment should always be undertaken. Further information is available in the Guidance section of the web tool.

Explanation of terms:
 Further explanation of all the information provided is available in the methods section of the MSB web tool

An abundance and diversity of raptors invariably signals a largely undisturbed ecosystem supporting an abundance of other wildlife

5. regular density
6. popular
7. indicators

ARDB

1. establish a secure communal store for observations
2. provide a live data observatory to monitor status & threats
3. identify, measure and model habitats (with forecasts)
4. monitor seasonal movements and threats to migrants
5. identify key transboundary habitat strongholds for wildlife
6. help build a community of raptor experts across Africa

Martial Eagle Historic Distribution

African Raptor Databank holdings as of 19 February 2015

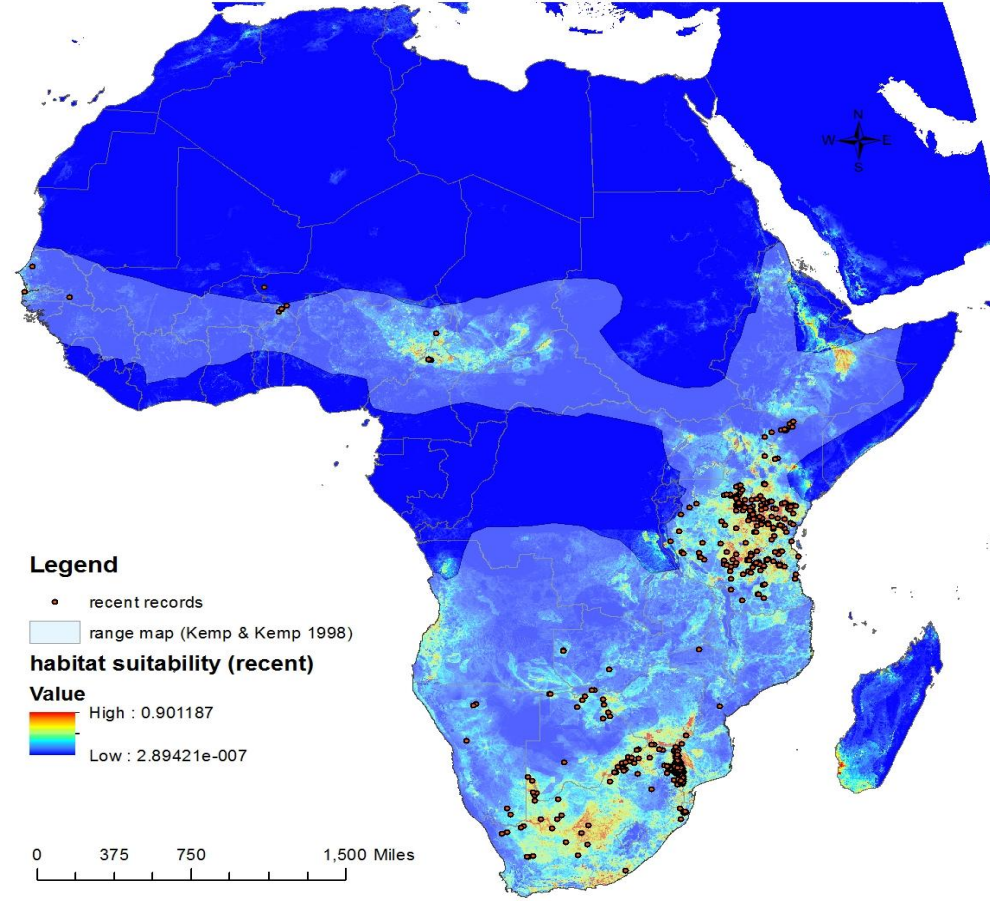

Legend

- historic records (pre 1977)
- range map (Kemp & Kemp 1998)
- habitat suitability (historic)**
Value
High : 0.960457
Low : 1.63606e-005

Martial Eagle Current Distribution
