

UNEP/CMS OFFICE

Abu Dhabi, United Arab Emirates

TEMPLATE FOR THE SUBMISSION OF NATIONAL REPORTS

GENERAL INFORMATION

Signatory State: CAMBODIA

Which agency or institution has been primarily responsible for the preparation of this report?

Marine Fisheries Research and Development Institute (MaFReDI)/ Fisheries Administration (FiA)

List any other agencies, institutions, or NGOs that have provided input:

3 Fisheries Administration Cantonments along the coastal of Cambodia (Kampot, Kompongsom and Koh Kong fisheries administration cantonment, Community Fisheries member/Local Authorities and NGOs

Memorandum in effect in Signatory State since (dd/mm/yyyy):

This report was last modified: (dd/mm/yyyy):

08 April 2010

Designated Focal Point (and full contact details):

Mr. Suy Serywath, Director of Marine Fisheries Research and Development Institute (MaFReDI)/FiA #186 Norodom Blvd. Phnom Penh Cambodia, B.O.Box 582.

INSTRUCTIONS FOR COMPLETION:

The purpose of completing the national report is to provide information on your country's implementation of the Dugong MoU including, as far as possible, contributions of cooperating non-governmental partners. For each main objective and its associated sub-objectives, you are a required to rate an order of priority (High, Medium or Low) from a national as well as sub-regional perspective. This information will allow us to collate regional and global priorities for conservation and management actions. It will also give an indication of what has been done already (helping to avoid duplication of effort); what is generally not being done (gaps that need to be addressed); and what interventions or specific assistance may be required?

The reporting template is divided into these nine main objectives, and asks specific questions in relation to the activities that need to be carried out to fulfil those objectives.

Text boxes can be expanded to accommodate longer answers or to explain and provide additional information, beyond what is requested. Details of future plans are especially encouraged. Wherever possible, please try to indicate the source of information used to answer a particular question, if a published reference is available. Remember that you are sharing information with other countries about your progress, so that it may be of benefit to them.

Implementation will be assessed in terms of the nine objectives of the Conservation and Management Plan (CMP). A process for self--assessment of effectiveness and completeness of actions undertaken – intended to stimulate reflection within a given Signatory State/Party on what more could or should be done in relation to a particular activity will be the basis for a workshop to be held in association with the First Official Signatory State Meeting on 4-6 October 2010 in Abu Dhabi.

Please submit the completed report to the UNEP/CMS Office – Abu Dhabi by email (cmsOffice.ae@cms.int) as a Word attachment. Feel free to attach additional material (published reports, maps, etc.) to this template and send them separately by e-mail or by post.

OBJECTIVE 1: REDUCE DIRECT AND INDIRECT CAUSES OF DUGONG MORTALITY

1.1	Threats facing dugong population
	Rate as a National priority: High ${oxdot}$ Medium ${oxdot}$ Low ${oxdot}$
	Rate as a Sub-Regional priority: High ☐ Medium ☑ Low ☐
	What has your country done to identify, assess and evaluate the threats to dugong populations? What kind of measures has your country developed to address these threats? Please check box when applicable and provide a specific description on the free text field* below.
	☐ Established baseline data collection and monitoring programmes to gather information on the nature and magnitude of threats
	 ☐ Regularly updated existing data on threats to dugong populations and their habitats ☐ Determined those populations affected by traditional subsistence and customary use, incidenta
	capture in fisheries, and other sources of mortality Conducted socio-economic studies among communities that interact with dugongs and their habitats
	Implemented programmes to correct adverse social and economic incentives that threaten dugong populations
	Facilitated the development of means of subsistence to minimise resultant adverse social and economic impacts
	Enacted, where not already in place, legislation and prohibited the direct use (capture or killing) of and domestic trade in, dugongs their parts or products, whilst allowed exceptions for traditional subsistence or customary use
	Established management programmes to enforce such legislation
	□ Negotiated, where appropriate, management agreements in consultation with other concerned States
	☐ Identified resources and sources of funding for the above programmes☐ Other, please describe:
	* Free text field for a specific description on actions implemented:
	In Cambodia, there is no species Dugong program but Dugongs were included in the list of Marine Endanger species. Marine endanger species program (sea turtle) were cooperate between FiA and SEAFDEC; and Cambodia is signatory state for sea turtle conservation
1.2	Dugong mortality in fishing activities
	Rate as a National priority: High ☐ Medium ☑ Low ☐
	Rate as a Sub-Regional priority: High ☐ Medium ☑ Low ☐
	What has your country done in order to reduce, to the greatest extent practicable, the incidental capture and mortality of dugong in the course of fishing activities? Please check box when applicable and provide a

specific description on the free text field* below.

□ Developed procedures and extension programmes to promote implementation of these measures □ Exchanged information and, upon request, provide technical assistance to together Signatory cooperating States to promote these activities □ Liaised and coordinated with fishing industries, fisheries management organisations and commit groups to develop and implement these activities □ Developed and implemented net retention and recycling schemes to minimise the disposal of fis gear at sea and on beaches □ Provided and ensured the use of onshore facilities for the disposal of ship-borne waste □ Other, please describe: □ There are no research on motility of Dugongs, However we can got verbal information from commit fisheries member. □ Dugong mortality due to human activities ■ Rate as a National priority: High ☑ Medium □ Low □ Low □ What has your country done in order to reduce, to the greatest extent practicable, the incidental mort of dugongs arising from other anthropogenic activities? Please check box when applicable and provides specific description on the free text field* below. □ Assessed the level, location and impact of anthropogenic impacts on dugongs and their habitats in areas sustain subsistence and customary use □ Established appropriate management programmes to ensure that anthropogenic impacts addressed, taking account of the temporal and spatial variability of dugong reproductive rates and compacts on the species in a precautionary manner	Developed procedures and extension programmes to promote implementation of these measures Exchanged information and, upon request, provide technical assistance to together Signatory and cooperating States to promote these activities Liaised and coordinated with fishing industries, fisheries management organisations and community groups to develop and implement these activities Developed and implemented net retention and recycling schemes to minimise the disposal of fishing gear at sea and on beaches Provided and ensured the use of onshore facilities for the disposal of ship-borne waste Other, please describe: Free text field for a specific description on actions implemented: There are no research on motility of Dugongs, However we can got verbal information from community fisheries member. Pugong mortality due to human activities late as a National priority: High Medium Low What has your country done in order to reduce, to the greatest extent practicable, the incidental mortality of dugongs arising from other anthropogenic activities? Please check box when applicable and provide a specific description on the free text field below. Assessed the level, location and impact of anthropogenic impacts on dugongs at ecologically relevant scales Reduced, as much as possible, all other human impacts on dugongs and their habitats in areas that sustain subsistence and customary use Established appropriate management programmes to ensure that anthropogenic impacts are addressed, taking account of the temporal and spatial variability of dugong reproductive rates and other impacts on the species in a precautionary manner Other, please describe:		
Developed procedures and extension programmes to promote implementation of these measures Exchanged information and, upon request, provide technical assistance to together Signatory cooperating States to promote these activities Liaised and coordinated with fishing industries, fisheries management organisations and commungroups to develop and implement these activities Developed and implemented net retention and recycling schemes to minimise the disposal of fisingear at sea and on beaches Provided and ensured the use of onshore facilities for the disposal of ship-borne waste Other, please describe: *Free text field for a specific description on actions implemented: There are no research on motility of Dugongs, However we can got verbal information from commung fisheries member. Dugong mortality due to human activities Rate as a National priority: High ✓ Medium □ Low □ Rate as a Sub-Regional priority: High ✓ Medium □ Low What has your country done in order to reduce, to the greatest extent practicable, the incidental mort of dugongs arising from other anthropogenic activities? Please check box when applicable and provides specific description on the free text field* below. Assessed the level, location and impact of anthropogenic impacts on dugongs at ecologically relescales Reduced, as much as possible, all other human impacts on dugongs and their habitats in areas sustain subsistence and customary use Established appropriate management programmes to ensure that anthropogenic impacts addressed, taking account of the temporal and spatial variability of dugong reproductive rates and cimpacts on the species in a precautionary manner	Developed procedures and extension programmes to promote implementation of these measures Exchanged information and, upon request, provide technical assistance to together Signatory and cooperating States to promote these activities Liaised and coordinated with fishing industries, fisheries management organisations and community groups to develop and implemented not retention and recycling schemes to minimise the disposal of fishing gear at sea and on beaches Provided and ensured the use of onshore facilities for the disposal of ship-borne waste Other, please describe: Free text field for a specific description on actions implemented:		and commercial fisheries, such as the use of alternative gears and spatial closures or limit or control the
□ Exchanged information and, upon request, provide technical assistance to together Signatory cooperating States to promote these activities □ Liaised and coordinated with fishing industries, fisheries management organisations and communications of develope and implement these activities □ Developed and implemented net retention and recycling schemes to minimise the disposal of fishing gear at sea and on beaches □ Provided and ensured the use of onshore facilities for the disposal of ship-borne waste □ Other, please describe: □ There are no research on motility of Dugongs, However we can got verbal information from communifisheries member. □ Dugong mortality due to human activities □ Rate as a National priority: High ☑ Medium □ Low □ Low □ What has your country done in order to reduce, to the greatest extent practicable, the incidental mort of dugongs arising from other anthropogenic activities? Please check box when applicable and provides specific description on the free text field* below. □ Assessed the level, location and impact of anthropogenic impacts on dugongs and their habitats in areas sustain subsistence and customary use □ Stablished appropriate management programmes to ensure that anthropogenic impacts addressed, taking account of the temporal and spatial variability of dugong reproductive rates and compacts on the species in a precautionary manner	 Exchanged information and, upon request, provide technical assistance to together Signatory and cooperating States to promote these activities Liaised and coordinated with fishing industries, fisheries management organisations and community groups to develop and implement these activities Developed and implemented net retention and recycling schemes to minimise the disposal of fishing gear at sea and on beaches Provided and ensured the use of onshore facilities for the disposal of ship-borne waste Other, please describe: Free text field for a specific description on actions implemented: There are no research on motility of Dugongs, However we can got verbal information from community fisheries member. 	sust	at has your country done in order to ensure that subsistence and customary use of dugong is ainable (in areas where it is permitted)? Please check box when applicable and provide a specific cription on the free text field* below.
		Assessed the level, location and impact of subsistence and customary use on dugongs at ecologically relevant scales
		Reduced as much as possible all other human impacts on dugongs and their habitats in areas that sustain subsistence and customary use
		Determined the cultural and subsistence values and uses of dugongs (both consumptive and non-consumptive)
		Established culturally appropriate management programmes to ensure that subsistence and customary use is sustainable, taking account of the temporal and spatial variability of dugong reproductive rates and other impacts on the species in a precautionary manner
		Ensured that such programmes do not have adverse unintended consequences (e.g. increase use of other threatened species such as marine turtles)
		Considered the development of alternative means of subsistence in areas where the subsistence and customary use of dugong is permitted to alleviate adverse social and cultural impacts
		Negotiated, where appropriate, management agreements on the sustainable level of subsistence and customary use (where it is permitted), in consultation with other concerned States, to ensure that such use does not undermine conservation efforts

	☐ Ensured that the management of other species (including fisheries) does not have adverse unintended consequences on the subsistence and customary use of dugongs where it is permitted
	☐ Other, please describe:

OBJECTIVE 3: PROTECT, CONSERVE AND MANAGE HABITATS FOR DUGONG

3.1	Dugong habitat mapping
	Rate as a National priority: High ☐ Medium ☐ Low ☑
	Rate as a Sub-Regional priority: High ☐ Medium ☑ Low ☐
	What kind of actions has your country implemented in terms of identifying and mapping areas of important dugong habitat? Please check box when applicable and provide a specific description on the free text field* below.
	 ☐ Identified and mapped areas of critical habitat such as seagrass beds and migratory corridors, using rapid assessment technique where appropriate ☐ Other, please describe:
	* Free text field for a specific description on actions implemented: There are no actions were implemented.
3.2	Protect dugong habitats
	Rate as a National priority: High Medium Low
	Rate as a Sub-Regional priority: High ☐ Medium ☑ Low ☐
	What has your country done to establish necessary measures in order to protect and conserve dugong habitats? Please check box when applicable and provide a specific description on the free text field* below.
	 □ Designated and managed protected/conservation areas, sanctuaries or temporary exclusion zones in areas of critical habitat, or took other measures (e.g. modification of fishing gear, banning destructive fishing practices, restrictions on vessel traffic) to remove threats to such areas and involving the local community as much as possible □ Considered protecting dugong habitats as part of ecosystem based management (e.g. networks of
	marine protected areas) Developed incentives for adequate protection of areas of critical habitat outside protected areas Assessed the environmental impact of marine and coastal development and other human activities
	 on dugong populations and their habitats Monitored and promoted the protection of water quality from land-based and maritime pollution, including marine debris, which may adversely affect dugongs and their habitats Strengthened the application of existing bans on the use of poisonous chemicals and explosives in the exploitation of marine resources
	Other, please describe:
