12<sup>th</sup> MEETING OF THE CONFERENCE OF THE PARTIES  
Manila, Philippines, 23 - 28 October 2017  
Agenda Item 19.2

**PRINCIPLES AND INITIAL SUGGESTIONS FOR A POSSIBLE REVISION  
OF THE NATIONAL REPORT FORMAT**

*(Prepared by the Secretariat)*

Summary

This document provides additional background information in support of document UNEP/CMS/COP12/Doc.19.2 and the draft Decision contained in that document on revising the format for national reports.

The information and suggestions here draw *inter alia* on analyses and lessons learned from experience with the national reports to COP11 and COP12, and on work done by the CMS Strategic Plan Working Group.

In addition to giving the background to the recommendations arising from that work, the present document also provides an initial illustration of modifications that could be made to the existing format to give effect to the recommendations, while also achieving an overall streamlining of the format and hence helping to reduce the reporting burden experienced by Contracting Parties.

## PRINCIPLES AND INITIAL SUGGESTIONS FOR A POSSIBLE REVISION OF THE NATIONAL REPORT FORMAT

### 1. Introduction

- 1.1. In COP Resolution 11.2 on the *Strategic Plan for Migratory Species 2015-2023*, the Parties to CMS requested the Secretariat to “consider amendments to the format for National Reports, where necessary, in respect of assessing implementation of the Strategic Plan and those indicators for which such reports are identified as a potentially important source of information, and the scope for streamlining existing reporting processes to reduce reporting burdens, and to submit any proposed amendments to the Standing Committee for its consideration and transmission to the 12th Meeting of the Conference of the Parties”.
- 1.2 The request in Resolution 11.2 therefore principally involves two issues: (i) supporting the assessment of the implementation of the Strategic Plan for Migratory Species 2015-2023 (SPMS) and (ii) streamlining the reporting process as a whole. Work on the first of these issues advanced in 2016 with the support of the Strategic Plan Working Group (SPWG) and a generous voluntary funding contribution from the Government of Germany. The Secretariat has subsequently worked further on the second issue, drawing *inter alia* on suggestions provided by UNEP-WCMC following the COP11 reporting cycle, and on the analysis of national reports submitted by Parties to COP12, as discussed separately in document UNEP/CMS/COP12/Doc.19.1.
- 1.3 Document UNEP/CMS/COP12/Doc.19.1 and the present document integrate the two lines of thinking into the basis for a single package of amendments that could be put forward for consideration by the Standing Committee and (subject to the Committee’s agreement) incorporation into a revised format to be used for reporting to COP13 and in subsequent reporting cycles.
- 1.4 Based on the COP11 mandate referred to above, the overall aim of a revision of the format for National Reports is to generate information that will be useful for making assessments of CMS implementation experience and progress towards achieving the goals of the Strategic Plan, while also being as efficient as possible by ensuring that the reporting burden on Parties is limited to those items that are most meaningful. This should therefore produce:
  - the essential picture of Convention implementation;
  - sufficient information to allow learning/adaptation;
  - the essential picture of progress towards objectives in the Strategic Plan;
  - maximum efficiency and worthwhileness.

### 2. Amendments to align the National Report Format with the Strategic Plan for Migratory Species

- 2.1 In the course of the development by the SPWG of indicators for the targets in the SPMS, the proposals made in several cases involved one or more indicators to be based on information to be provided by Parties in their triennial national reports to COPs. In many of these cases a question or questions in the existing National Report Format touches at least partly on the issue concerned; but in most cases, to align properly with the target and provide information that will help in assessing progress, some reformulation of the question(s) concerned would be required.
- 2.2 Accordingly, details of this cross-matching to the National Report Format, and suggestions for new or revised questions to address the Strategic Plan targets, have

been included in successive drafts of the “Indicator Factsheets for the Strategic Plan for Migratory Species” developed in two post-COP SPWG meetings, with input also from discussion in the CMS Scientific Council and Standing Committee, and from a public consultation undertaken during April-August 2016. A further public consultation on a revised (third) version of the Factsheets as a whole took place from April-June 2017, and further revised (fourth) version has been provided to COP12 in Information Document UNEP/CMS/COP12/Inf.26.

- 2.3 It is important to note that the proposals for National Report Format questions to underpin the SPMS indicators mostly do not consist of additional questions, but are instead modifications or replacements of the existing ones. In some places the proposed new question is shorter and less elaborate than the existing one, and more focused on what specifically needs to be known to assess the target; so already some useful streamlining has been identified. Overall in respect of the 16 targets, new questions are proposed for four of them, for two of them the proposed questions are slightly longer than the existing ones, for another two they are more or less the same, in seven cases they are shorter and simpler, and one question is proposed for complete deletion.
- 2.4 In 2014, the results of an analysis of national report information submitted to COP11 were presented in document UNEP/CMS/COP11/Doc.19.3, “Analysis and Synthesis of National Reports”. The document made a general recommendation for the future to tailor all the National Report Format questions so that they would relate to specific objectives in the SPMS. The equivalent analysis presented to the present COP in document UNEP/CMS/COP12/Doc.19.1 reinforces the same conclusion, as does the document on implementation and monitoring of the SPMS, UNEP/CMS/COP12/Doc.15.
- 2.5 Within the CMS family, AEWA has updated its national report format in a way that takes the AEWA Strategic Plan into account and includes cross-references to Strategic Plan targets; although without going as far as a structural alignment. It may be of interest also to note that the Ramsar Convention Standing Committee at its 52nd meeting in June 2016 approved a revised National Report Format for Ramsar COP13 in 2018 in which there has been a systematic restructuring to group questions under each of the targets in the Ramsar Strategic Plan 2016-2024.
- 2.6 At its 45th meeting in November 2016, the CMS Standing Committee considered document UNEP/CMS/StC45/Doc.14 on the revision of the National Report Format. The document proposed that a revision of the National Report Format could be undertaken in two steps, with a first set of amendments (consisting mainly of integrating questions for the assessment of progress towards the targets of the Strategic Plan) being approved by the Standing Committee in time for use in the COP12 reporting cycle, and then a second set of amendments (taking into account the final outcomes of SPWG work on indicators and extending to a more in-depth revision of the format, including any appropriate streamlining) being prepared in time for consideration and approval by COP12. The specifics of the “first step” SPMS-related proposals (extracted from the Indicator Factsheets) were appended to the document.
- 2.7 After some discussion the Committee decided not to make changes in two steps, but instead to consider one overall revision at a later date. In the meantime for reporting to COP12 the existing (COP11) format has been used, with limited adjustments to take into account only the new Resolutions and species listings agreed by COP11.

3. Amendments to address other issues

- 3.1 Apart from the one point mentioned in section 2 above regarding alignment with the Strategic Plan for Migratory Species, the UNEP-WCMC analysis of national reports presented to CMS COP11 did not address the future shape of the Report Format itself. Subsequently however UNEP-WCMC did compile some observations on this, and these were submitted (to the Secretariat only) in October 2014, in a separate document entitled "Recommended improvements to the CMS National Report Format".
- 3.2 The 2016 Standing Committee paper referred to above contained various proposals for questions to be included in the National Report Format in relation to the targets in the Strategic Plan, but it did not make any proposals about what the format itself should look like; nor did it address any of the reporting issues that relate to implementation of the Convention in respects other than those covered by the Strategic Plan, and/or those that will require reporting on an on-going basis beyond the Plan's time-horizon (2023).
- 3.3 A Supplementary Note was therefore provided to the Committee at the same time (document UNEP/CMS/StC45/Inf.5) on "Principles and general approach for pursuing possible further work on the National Report Format between StC45 and COP12". This drew upon comments provided by UNEP-WCMC following their analysis of the reports to COP11, and pointed out that, in line with paragraph 11 of Resolution 11.2, it would make sense to use the opportunity of any SPMS-related adjustments to the National Report Format to address at the same time any other updating improvements that seemed desirable, in particular where possible to seek streamlining of the reporting burden on Parties, while maintaining the COP's crucial capability to monitor and evaluate the most central aspects of Convention implementation.
- 3.4 Subsequently, the lessons learned from the analysis of the reports to COP12 have generated further specific recommendations for factual corrections and adjustments for improved consistency and clarity in the questions in the National Report Format (see document UNEP/CMS/COP12/Inf.30).
- 3.5 CMS meetings during 2016 of the Standing Committee, the SPWG and the Working Group on the Development of a Review Process under the Convention on Migratory Species generated some other observations on the National Report Format and/or on national reporting, which have been taken into account. The Review Process Working Group *inter alia* considered national reports to be an important component in obtaining information for review (see document UNEP/CMS/COP12/Doc.22).
- 3.6 The ideas put forward in all of these documents have been consolidated and incorporated in the suggestions set out in the present paper, as a potential starting-point for any revisions that might be considered in future.

4. Specificity, clarity and "closed" questions

- 4.1 One general comment running through WCMC's 2014 analysis related to the specificity and clarity of the questions in the format. A considerable proportion of the information reported by Parties in the COP11 round was found to be of no direct relevance to the questions, due possibly to lack of clarity in those questions. Focusing on only the most relevant information will make reports more comparable with each other and should also contribute to reducing the overall burden of the process. In addition to careful wording, achievement of this can also be helped by using "closed" questions where pre-determined response options are provided, such as yes/no check boxes or drop-down menus of multiple-choice answers (at present a combination of methods is used).

- 4.2 The suggestion was also made to make more/clearer use of “dependent questions”, where the response category selected for one question determines which follow-up question (if any) subsequently appears (for example answering “yes” brings up a follow-up question about more information, but answering “no” does not). This would shorten the report in respect of aspects that are not applicable to a given Party, and would help to avoid the confusion that was evident in the COP11 round where many Parties responded to questions that were not actually relevant to them.
- 4.3 Some compilers of reports have noted that open questions requiring subjective judgements and narrative responses increase the burden of effort required to respond, and they express a preference for “tick-box”-style questions wherever possible. Phrases like “please provide more details” should be made less vague and open-ended by asking instead “please provide a short summary”.
- 4.4 A potential ambiguity was noted in the analysis of COP12 reports which led to a recommendation that the wording of questions could usefully be adjusted to improve consistency/reduce ambiguity as to whether they are asking about actions undertaken “by the country” (i.e. the Party government) or “in/in relation to” the country (i.e. including actions by others, such as NGOs).
5. “Pre-filling” of reports by the Secretariat; and the time period being reported on
- 5.1 “Pre-filling” of certain report sections by the Secretariat prior to issuing the format to Parties probably helped national compilers to avoid a certain amount of re-originating of information they had provided on previous occasions. It appears however that many did not replace outdated information with updates, or did so in some sections and not in others, resulting in internal contradictions within the individual reports. Analysis was made problematic by an inability to distinguish pre-filled data (which may or may not still be correct) from data newly entered in the most recent reporting period.
- 5.2 If “pre-filling” of data is undertaken again in future reporting cycles, some method should be found to enable such pre-filled data to be readily distinguished from new data in the final submitted reports. In general it would help also for Parties to provide more specificity in all report sections concerning the time-period to which a given response relates, making a particular effort to focus on information about status, events and activities during the most recent triennium (since the last COP).
- 5.3 It would further be helpful for more of the questions to specify explicitly that the information to be reported should relate to the reporting period concerned, i.e. the triennium since the last COP. Any information that relates to previous triennia should be clearly distinguished as such. In some sections of the present format the questions do not specify that the results concerned should relate to the triennium being reported on, and reports vary considerably in the approach taken to this, with some seemingly referring back over the entire history of the country’s implementation of the issue concerned, others citing information from previous triennia, some implying that the information provided relates to the period since the last COP, but most giving no indication one way or the other as to the time period covered. Other ambiguities/internal contradictions concerning the inclusion of past/present/future status of activities (for example in the section on telemetry – see below) should also be addressed, by reformulating those questions.
6. Positive outcomes
- 6.1 There may be a case for modifying the questions that ask about “positive outcomes”, to allow Parties to report actions which were attempted but which turned out not to be successful (i.e. not only outcomes that are “positive”), since this can be an equally

useful area of lesson-learning. Scope should also be allowed for Parties to comment on the relative balance between positive and negative results.

## 7. Species data; and new Appendix listings

- 7.1 UNEP-WCMC made recommendations concerning the questions (II.6.1 and III.3.1) about potential new species listings on the Convention Appendices. Parties reported on species which they regard as qualifying for inclusion in the Appendices of the Convention but which are not yet listed. Several Parties misconstrued these questions or answered them incompletely. Again in the COP12 round there appears to have been some confusion about the species status information being used for this, possibly some confusion also about what the question is asking, and it seems that a number of Parties may be relying on out of date versions of the Appendix lists. In addition, on the basis of their threat status, nearly three quarters of the species put forward in the COP12 round would be rendered invalid if the eligibility guidelines in the Annex to Resolution 11.33 were followed. It has been recommended to add a hyperlink from the questions to the "Species+" and IUCN Red List databases to provide Parties with quick access to the correct qualifying species for their country.
- 7.2 Even in respect of genuinely unlisted taxa, a considerable mis-match has been revealed between intentions stated in the national reports concerning listing proposals and the actual proposals submitted to COP, although the reasons for this are unclear. It would be worth investigating any difficulties that Parties have experienced which may be the cause of the observed lack of alignment between positions on Appendix listing revealed in national reports, compared with those revealed by formal listing proposals.
- 7.3 In the English version of the format there is an error in the question which asks Parties to indicate whether they are a Range State for any other migratory species which are classified as endangered but which are not currently listed in Appendix I, where the word "not" has been inadvertently omitted before the words "currently listed". In theory this could allow a Party to interpret the question as meaning that they should indicate species which are on Appendix I and for which they are a Range State but on which they have not provided details in the preceding (taxonomic) parts of the report section. In principle however, details should have been provided in those preceding parts on all relevant species, so the working assumption is that all Parties have done so, and that they have read the question in the sense that it was intended, rather than the way it was written. In the French and Spanish versions the text is correct. The error in the English version should be corrected.
- 7.4 Concerning potential candidates for listing Appendix II, again there have been several instances where species are mentioned which are already on the Appendix, and again there is a notable difference between the national report answers concerning intentions to propose Appendix II listing on the one hand, and the actual formal listing proposals submitted to COP12 on the other.
- 7.5 The suite of species cited by one Party was identified from a systematic review of certain bird families, so in terms of the report format question, the country concerned is not necessarily regarding itself as a Range State for all of the species named. The approach they took is helpful nonetheless, despite not being strictly accommodated by the wording of the question. It is recommended accordingly that the question which asks about candidate species for adding to Appendix II should accommodate answers based on analyses undertaken by countries on species/species groups for which they are not necessarily a Range State, but in respect of which they may nevertheless have led the relevant international research.

- 7.6 Species-specific questions in Section II of the template are tailored to individual Parties according to which species occur in the countries concerned. UNEP-WCMC suggested that this approach could be extended also to the more general taxonomic group questions, based similarly on species distribution data. As above, a way of making the use of data for this as up to date as possible would be to link the on-line reporting platform dynamically to the “Species+” database, which in turn could be linked to the CMS species database. Discussions between UNEP-WCMC and the CMS Secretariat have already taken place on this latter linkage.
- 7.7 The Annex to the report format provides a list of all Appendix II species and asks Parties to indicate the status of each one in their territory, choosing one of four options (“Range State”, “not a Range State”, “no information available” or “extinct at national level”) and providing a published distribution reference. If the suggestion above is followed to link the on-line reporting platform to the “Species+” and CMS species databases, this would enable the information there to be displayed to the national report compilers, who would then only need to provide updates, rather than manually re-populating the whole Annex. The approach could be extended to Appendix I species as well as those on Appendix II.
8. Threats and pressures
- 8.1 The report format asks several questions about the status of Appendix I species in each country, for each of five taxonomic groups in turn, including the pressures facing these species and the obstacles impeding their migration. In practice, aspects of these latter two fields are commonly mixed together, so the distinction has not proved meaningful for analysis purposes. The questions suggest some possible types of threats (as well as allowing other types to be explained in a narrative) but in a way which is inconsistent between the different taxonomic sections.
- 8.2 All the resulting threat data need to be treated with caution because the tendencies appear to have been led to some extent by the way that priorities were suggested in the questions, and because (as mentioned above) the questions were not asked/prompts were not given in the same way for each taxonomic group (for example the extra question on management issues in the terrestrial mammals section is likely to have contributed to the greater prevalence of references to that issue in reported threats affecting that group).
- 8.3 Other questions in this section of the format asked about actions being taken to address the threats, and about the progress and success of those actions. Responses to this were reported in a variety of different ways, and there is no valid basis for quantifying or otherwise evaluating the priorities and significances among the actions described. Progress or success was sometimes mentioned, but more often the mention of an activity could not be distinguished from any comment about the progress achieved (“protection of habitat” or “raising awareness” for example could refer either to an activity or a result, or both). Apart from a few references to e.g. “breeding success improved” and one or two specific project results in particular areas, the “progress/success” answers have generally not provided any evaluation of conservation status outcomes.
- 8.4 In light of the issues identified above it would be advisable to rationalize the way in which questions are asked about threats affecting Appendix I species, in order to avoid bias in prompting the priorities expected, and to have greater consistency in these questions across the different taxonomic sections. A revised approach to this could perhaps draw on the categorization of threat types devised specifically for the analysis presented in document UNEP/CMS/COP12/Inf.30.

9. New Agreements

- 9.1 Parties are asked to indicate, for each of six taxonomic groups in turn, whether they have been involved in initiating or participating in the development of any new CMS Agreements (including Memoranda of Understanding) during the relevant reporting period. They are also asked about any future plans in this regard, and about any particular needs for assistance.
- 9.2 This is a somewhat problematic area of report information. It was apparent from details (where they were entered) that the majority of Parties providing “yes” answers in the 2017 round were not in fact answering the questions put. This may be because the questions were being mis-read, or it may be that Parties were simply taking the opportunity to provide other kinds of information they wished to provide about Agreements (i.e. those already in existence, rather than new ones in prospect or in development). Some answers were also entered in the wrong taxonomic section. Many Parties were in fact commenting only on existing Agreements rather than the development of new ones.
- 9.3 “Development” itself appears to have been interpreted in divergent ways. It could be that some respondents (who for example answered “yes” to developing new Agreement but then referred to hosting a Meeting of Signatories of an existing MOU) are interpreting “development” as including the development of implementation actions, and interpreting “new Agreements” as including “recently concluded” ones. Consideration should be given to the possibility of adding advice on the interpretation of the phrase “development of new Agreements” (or re-wording the questions on this subject), to clarify whether it includes actions to develop the application of newly-concluded Agreements, or only the development of proposals for concluding Agreements that do not yet exist.

10. Protected areas

- 10.1 The first question in the protected areas section of the report format asks whether migratory species are taken into account in the selection, establishment and management of protected areas in the country. The meaning of “taken into account” is not specified, and it appears to have been interpreted in different ways in different places. Some reports mention merely that migratory species occur in protected areas, while some go further and refer to systems that mention migratory species as a possible ingredient in site selection criteria. In a few cases Parties have been more explicit about migration-related factors playing a part. It is recommended that consideration be given to the possibility of adding advice on the interpretation of the phrase “taken into account” in the questions on protected areas (or re-wording the questions on this subject), to encourage a greater focus on aspects specifically related to the needs of migratory species.
- 10.2 A second part of the question asks Parties to “identify the most important national sites for migratory species, and their protection status”. Many Parties clearly find it difficult to isolate and account specifically for the migratory species component of wider conservation programmes on protected areas and ecological networks. Moreover, the question is asked separately in relation to terrestrial, aquatic and marine areas, and many Parties have found it difficult to split protected areas along these three-category lines. The split is more workable where species-based measures are concerned, but less workable where habitat- or ecosystem-based measures are concerned. Many areas will in particular have a mix of terrestrial and aquatic habitats.

- 10.3 The analysis of COP12 reports found that interpretations of “marine” varied, with for example some reports answering “yes” to marine where the country’s protected areas extend seaward only as far as intertidal estuarine areas, and others answering “no” even though some near-shore marine waters are included in their coastal protected areas. One or two answering “yes” to marine cited in this connection only protected areas consisting of offshore islands, and it is not clear in these cases whether marine habitat as such is really included or not. Quantitative comparisons between any of these categories therefore risk being highly spurious. It would therefore be worth re-examining the usefulness of attempting to ask for a disaggregation of information about aquatic, terrestrial and marine situations respectively, in questions relating to protected areas.
11. Satellite telemetry
- 11.1 The first question in this section asks “In the current reporting period, has your country undertaken conservation/research projects that use satellite telemetry”? Parties answering “yes” were also invited to say whether the projects concerned were completed, or still ongoing, or were “in preparation”. This last option may cause some confusion, as it seems rather unrelated to the question about projects that have been “undertaken”, and is more relevant to the separate question about future projects.
- 11.2 There may be some confusion concerning this aspect of the question too. For example, one Party answering “completed” nevertheless showed from other parts of their answers that a project was in fact still ongoing. Another Party ticked the box for “completed” but had also in the first question said that no projects took place during the reporting period. In this case they may have been interpreting “completed” as applicable to a project which took place prior to the reporting period – the question is ambiguous in this respect and it is not possible to know from the reports which interpretation any given Party may have followed. A different explanation must apply to the two Parties who indicated that no projects had been undertaken during the reporting period but then in apparent contradiction ticked the box for “ongoing”. A possible explanation might be that the first question asks whether the country has undertaken projects, and the responses might be drawing a distinction between this and projects undertaken by another entity, such as an NGO – this is speculation and there is no evidence in the reports either way; but it identifies another potential ambiguity in the wording of the question.
- 11.3 These interpretations are further complicated by the automatic pre-filling of the report format in many cases with data from previous cycles (see earlier above), so some of the apparent mis-matches in timeframes are likely to be a result of this earlier information persisting unchanged alongside partially-completed new information which then contradicts it.
- 11.4 Parties who have undertaken projects are invited to provide details. There is some suggestion that the animal tracking or telemetry projects being reported may not always have a satellite-related component. If a distinct section on telemetry projects is retained in the format in future, it may be helpful to remove the restriction to “satellite” telemetry, so that other relevant telemetry projects (that are not satellite-based) can also be reported.
- 11.5 The phrase “projects that use satellite telemetry” in the format question does not explicitly specify animal-based projects as opposed to habitat/landscape-based projects, and this perhaps points to another ambiguity, if some Parties have assumed the narrower scope (i.e. they have only reported projects addressing migratory species, as it seems nearly all have done) and others have assumed a broader scope (i.e. considering it relevant to report any kind of “conservation/research projects that use

satellite telemetry”, in the words of the question). If a distinct section on telemetry projects is retained, it would be helpful to clarify whether the questions are intended to embrace habitat/landscape-based projects, or to be restricted only to animal-based projects.

- 11.6 Some respondents indicated in answer to the question about “projects in preparation” simply that existing projects would continue. In principle if all Parties interpreted the question in the same way then this kind of answer should always match up with an “ongoing” response in the first part of the section. In practice this is not the case, and hence another ambiguity in the question is apparent, whereby some respondents appear to interpret “planned projects” only as new projects which have not yet started, and others interpret it to include the planned continuation of existing projects. (In fact, further mixing of past and future between answers to these two questions occurs in other ways too, with some Parties simply using one of the questions as the place in which to answer both of them).
- 11.7 As with some other sections in the format, this section asked for a description of the positive outcomes of any actions taken. Where a Party indicated that a project was “ongoing” and gave no response to the question about outcomes, it might reasonably be assumed that this is because it is too early for the project concerned to be showing any results; although it is not necessarily certain that this is the reason, and in such cases it would be preferable for the Party to indicate explicitly “N/A” (as many did for example in the situation where no projects had been undertaken).
- 11.8 One respondent in the 2017 round described some results, yet had indicated that no projects had been undertaken (and none were planned), so this also seems illogical. The interpretation in this case is probably that what was being described was a *desire or aspiration* for results that could be possible if a project was to be undertaken – if so, this could in theory also be the case for some of the other responses in this section, but it would not necessarily be clear that the results in such cases were “intended/hoped for” rather than actual.
12. Mobilization of resources
- 12.1 National report information at present does not quantify resource mobilization in a way which would shed light on progress towards achieving Strategic Plan Target 16 (on resource mobilization), nor does the information go beyond “activity reporting” into the question of assessing conservation outcomes.
- 12.2 The report format asks respondents to indicate the taxa that have benefited from the activities referred to in the context of resource mobilization. It appears that in most if not all cases the phrase “have benefited” is interpreted as “having been the target of activities”, rather than any attempt having been made to reflect an assessment of the actual conservation outcomes that resulted. In other words the taxa mentioned appear to be reported as the intended beneficiaries of the funded activities, rather than the answers strictly responding to the question in terms of whether actual benefits have resulted.
13. Implementation of COP Resolutions and Recommendations
- 13.1 Section X of the format asks about implementation of COP Resolutions and Recommendations, currently under 42 different headings. New Resolutions, Recommendations (and now also Decisions) from the most recent COP need adding each time the format is issued (and superseded ones need removing), so there is never full comparability here from one reporting cycle to another.

- 13.2 UNEP-WCMC suggested pruning the list down to a few high priority COP outputs on which it is most important to have progress information, and to structure the question in a more closed way, focusing on specific action points in the decision texts. The list is already selective, but the rationale for the selection (and for the structure of clustering which has been applied) is not clear.
- 13.3 If the Parties agree to consolidate COP decisions in the way proposed for COP12 (see Standing Committee Document UNEP/CMS/StC45/Doc.19/Rev.1 “Review of Decisions”), that process will have implications for the approach taken to questions in the National Report format about implementation of COP Resolutions. The development of these two strands of structural adjustment will therefore need to advance in tandem with each other.
- 13.4 An alternative approach may also be possible. An overlap/duplication between Section X and some other specific topics addressed elsewhere in the report format has been noted, for example the Resolutions relating to financial matters, ecological networks and development of new CMS Agreements (this is apparent also from the analysis against the SPMS targets presented in Document UNEP/CMS/StC45/Doc.14). If a Party has not said much about these issues in one of the places in the format where it has been asked to do so, it may have said more in the other. One suggestion is to allocate all questions about progress with (selected priority) Resolutions, Recommendations and Decisions to the relevant topic questions elsewhere in the format, which would then allow Section X to be deleted. Hyperlinks to the texts of the relevant Resolutions/Recommendations/Decisions (updated of course in light of any consolidation/repeals) could also be provided.
- 13.5 It would therefore be useful to discuss further (and to be more transparent about) the rationale for the choice of decisions to include in the section on Resolutions, Recommendations (and in future, Decisions), considering *inter alia* the areas of overlap between them, and the overlap with some of the other sections of the report format. The relationship between this section and possible future report format questions focused on targets in the Strategic Plan for Migratory Species also needs to be considered.
- 13.6 After the “Strategic and institutional matters” cluster of questions in the format there is a sub-heading “Other Resolutions/ Recommendations”, which can be read either as a sub-heading that introduces the clusters which follow, or as an information field in its own right. A few countries have interpreted it in this second way, and have inserted information on Resolutions/Recommendations not discussed elsewhere (or have inserted “not applicable” or “no comment”), while others used the final field “Other remarks” for such information. It would be desirable to remove this ambiguity from future versions of the format.
- 13.7 A few answers in this section of the reports suggest that there are different understandings about the extent to which some strategically–expressed COP decisions have a national implementation dimension to them; and advice on this may be necessary too.
14. Streamlining and synergies
- 14.1 A general concern has been noted regarding the complexity of the current format, and the desirability of streamlining it and making it more “user-friendly” (while not losing its ability to generate essential information in a consistent way across all Parties).

- 14.2 It may also be possible to identify similarities in the content of some of the questions being asked in the CMS process and in the national reporting processes of other MEAs, and to see whether there are ways in which countries which are Parties to multiple Conventions might be able to streamline their data-gathering and avoid duplication of effort. Reporting in CMS of course has to be directed specifically towards actions for the conservation of migratory species; but in the case of Ramsar, CITES and CBD for example there may be common interests with CMS where reporting approaches may at least helpfully converge to some extent. The Joint Work Plan for the CMS and Ramsar Conventions for 2015-2017 supported this idea with the inclusion of an item on streamlining and harmonization of reporting processes.
- 14.3 Suggestions have also been made regarding ways of reducing duplication of effort with the reporting processes under the individual instruments in the CMS Family.
- 14.4 In the CBD, the Parties in their Decision XIII/27 (COP13, December 2016) requested the finalization of a “resource manual” for the sixth round of CBD national reports, addressing for example guidance on common data sources, indicators and other relevant information provided by the Secretariats of other biodiversity-related Conventions. An analogous guidance resource for CMS Parties might be worth considering in future.
- 14.5 UNEP-WCMC has recommended a general check to ensure that there is no duplication between the National Report format questions and information provided by other means, so that Parties do not add unnecessary work to their reporting burden. The example cited was a question about contributions to the CMS Trust Fund; but the general principle is that revision of the format should take account of other relevant information flows under the Convention.
- 14.6 Another suggestion made from a different quarter on an earlier occasion was to consider a specific section in the Format seeking summary information from Parties about their implementation of each CMS instrument to which they are a Party or a Signatory, with a view to reducing duplication of effort with the reporting processes under the individual instruments.
15. The way forward; and an initial outline of possible revisions
- 15.1 Based on the work done to date and the ingredients described above, document UNEP/CMS/COP12/Doc.19.2 proposes that a revision should be developed of the National Report Format to be used by Parties in reporting to COP13 and in subsequent reporting cycles. A proposed Decision is appended to that document in which the mandate would be given to the Secretariat to develop the revised format intersessionally, for consideration and possible endorsement by the Standing Committee in time to be used for reporting to COP13.
- 15.2 Annex 1 to the present document provides an initial outline of suggestions for a revised format. It would be possible to make a few minor changes to the existing format simply to add questions that pick up (for example) reference to the 2015-23 Strategic Plan; but in order to achieve something more than that (for example in terms of streamlining and updated relevance), a more structural revision is offered here, taking account of all the issues raised above.

**ANNEX 1**

**Initial outline of suggestions for a revised National Report Format**

**Note:** The suggestions below at this stage show only the origins, the architecture and the principles of a possible revised format, and not yet the detail of wordings of questions (except to the extent that a number of wordings for questions related to the targets of the Strategic Plan for Migratory Species have been previously circulated and discussed in that context). Alongside each suggested section of the format is a column showing the equivalent questions in the existing format. All sections of the existing format have been allocated to one or other of the proposed new sections, so that a complete audit-trail of changes should be possible. Some annotated comments and explanations are given in italic type.

|  | <p>to review and update the data (e.g. new published distribution references and details concerning species added to Appendix II at COP9 and COP10).<br/>Please choose the one that applies. [=“Range State”, “not a Range State”, “no information available” or “extinct at national level”].</p>  |
| <p><b><u>LEGAL PROHIBITION OF THE TAKING OF APPENDIX I SPECIES</u></b></p> <p><i>[Question suggestions still to be formulated].</i></p> <p><i>[Taking of Appendix I migratory species, particularly where it is illegal or unregulated, is likely to constitute a direct pressure on these species and their habitats, and to affect their conservation status. It is therefore an issue which could potentially be considered in the proposed sections below on SPMS Targets 5 and/or 6 &amp; 7. The pressure however arises from the activity of taking itself, and not inherently because an activity is illegal. This latter (regulatory) aspect is important to report too however, in addition to any reporting of actual pressures on the species concerned, not least because such regulation in itself is a matter of legal compliance with the Convention. Article III.5 requires Parties to “prohibit” taking of Annex I species (subject to certain exceptions), and this is therefore a more specific regulatory obligation than the obligation to undertake the various other conservation measures referred to in Article III.4. (Article III.4 measures are more suitable for reporting in the proposed section below on SPMS Targets 6 &amp; 7).</i></p> <p><i>Accordingly this issue is given its own section in the proposed reporting format, because (like accessions and Appendix listings, covered in the preceding two sections) is different in nature from the issues otherwise covered under the SPMS Targets below].</i></p> | <p><b>II. Appendix I species</b></p> <p>1. General questions on Appendix I species <i>[this group of questions repeated for each taxonomic group]</i></p> <p>1. Is the taking of all Appendix I [bird etc] species prohibited by the national implementing legislation cited in Table I(a) (General Information)?</p> <p>If other legislation is relevant, please provide details:</p> <p>1a. If the taking of Appendix I [bird etc] species is prohibited by law, have any exceptions been granted to the prohibition?</p> <p>If Yes, please provide details (Include the date on which the exception was notified to the CMS Secretariat pursuant to CMS Article III(7):</p> <p><b>X.
