

CONVENTION ON MIGRATORY SPECIES

Distribution: General

UNEP/CMS/COP11/Doc.23.1.1
13 August 2014

Original: English

11th MEETING OF THE CONFERENCE OF THE PARTIES
Quito, Ecuador, 4-9 November 2014
Agenda Item 23.1.1

PROGRAMME OF WORK ON MIGRATORY BIRDS AND FLYWAYS

Summary:

Pursuant to Resolution 10.10 on Flyways, this document includes a cover note, a draft resolution (Annex 1), a Programme of Work on Migratory Birds and Flyways 2014-2023 (Annex 2) and an Americas Flyways Framework (Annex 3). These documents have been discussed during the CMS/WHMSI workshop which took place in Jamaica in March 2014 and subsequent meetings held in Washington DC and Bonn.

The 18th Meeting of the Scientific Council (Bonn, 1-3 July 2014) recommended the submission of this draft resolution and its annexes to COP for adoption.

The ongoing CMS work on flyways is part of the Scientific Council Work Programme, the Strategic Plan 2006-2014 and the upcoming Strategic Plan for Migratory Species 2015-2023.

PROGRAMME OF WORK ON MIGRATORY BIRDS AND FLYWAYS

(Prepared by the UNEP/CMS Secretariat)

1. For the first time, CMS has a strong basis for development of a Global Programme of Work on Migratory Birds and Flyways (POW) based on the comprehensive CMS Resolution 10.10 on Guidance on Global Flyway Conservation and Options for Policy Arrangements that was unanimously approved by COP10 in Bergen (November 2011).
2. The POW has been prepared by the Flyways Working Group in order to provide Parties and stakeholders with a clear road map with timelines, priorities and indicators for the conservation of flyways and migratory birds.
3. In addition to CMS Resolution 10.10, a number of other CMS resolutions, directly or indirectly, are linked to supporting conservation and management actions for migratory birds and their habitats, monitoring, reducing threats and increasing resources for these activities. The aim is to bring together all the actions needed for migratory species and habitat conservation into one POW.
4. Resolution 10.10 also requested Parties to work in close partnership with existing flyway organizations and initiatives in the Americas, and in particular the Western Hemisphere Migratory Species Initiative (WHMSI), to develop an overarching conservation Action Plan for migratory birds in the Americas, the Americas Flyways Framework, recognizing especially the established programmes of work and taking into account existing instruments.
5. A number of meetings have taken place to discuss the POW and the Americas Flyways Framework, in particular a CMS/WHMSI experts meeting that took place in Jamaica on 11-14 March 2014 and subsequent meetings held in Washington DC and Bonn. A meeting of the Flyways Working Group took place on the 30 of June 2014, back to back with the meeting of the Scientific Council. A resolution to allow for the adoption of the POW and the Americas Flyways Framework was also prepared.
6. The 18th Meeting of the Scientific Council recommended that the draft resolution and its annexes be submitted to COP for adoption.

Action requested:

The Conference of the Parties is requested to:

- Adopt the draft resolution included as an Annex to this cover note, including the Programme of Work on Migratory Birds and Flyways and the Americas Flyways Framework

ANNEX 1

DRAFT RESOLUTION

PROGRAMME OF WORK ON MIGRATORY BIRDS AND FLYWAYS

Recognizing that a flyways approach is necessary to ensure adequate conservation and sustainable use of migratory birds throughout their ranges, combining species- and ecosystem-based approaches and promoting international cooperation and coordination among states, the private sector, Multilateral Environmental Agreements, UN institutions, Non-Governmental Organizations, local communities and other stakeholders;

Also recognizing that there are specific threats of particular significance to migratory birds along flyways that continue to have an impact on these species and their habitats including: inland wetland reclamation; destruction of coastal and inter-tidal habitats; loss of forests and grasslands; agricultural intensification and habitat modification through desertification and overgrazing; inappropriate wind turbine development; collisions with power lines and electrocutions; illegal and/or unsustainable killing, taking and trade; overfishing and the bycatch of seabirds; lead shot and other poisoning; invasive alien species and avian influenza and other disease; and marine debris;

Acknowledging that the very broad and comprehensive mandate of Resolution 10.10 on Guidance on Global Flyway Conservation and Options for Policy Arrangements needs to be streamlined and focused into a more detailed Programme of Work in order to provide Parties and stakeholders with a clear road map with timelines, priorities and indicators for the conservation of flyways and migratory birds;

Recalling that Resolution 10.10 requested CMS to work in close partnership with existing flyway organizations and initiatives in the Americas, and in particular the Western Hemisphere Migratory Species Initiative (WHMSI), to develop an overarching conservation Action Plan for migratory birds in the Americas, recognizing especially the established programmes of work and taking into account existing instruments;

Aware that Parties have endorsed a Strategic Plan for Migratory Species 2015-2023 with clearly defined goals and targets to promote actions to ensure the favourable conservation status of migratory species and their habitats, and that the present POW will make a significant contribution to delivering major parts of this Plan;

Acknowledging that Parties that are also Parties to the Convention on Biological Diversity have endorsed its Strategic Plan 2011-2020 and the Aichi Biodiversity Targets that commit them to *inter alia* preventing extinction of threatened species and increasing the overall area and improving the habitat quality of protected areas of terrestrial, coastal and marine habitats, as well other effective area-based conservation measures, integrated into the wider landscapes and seascapes (Targets 11 and 12 respectively);

Also acknowledging the 2013 Resolution of Cooperation signed between the Secretariats of CMS and the Conservation of Arctic Flora and Fauna Working Group (CAFF) of the Arctic Council and tripartite CAFF/CMS/AEWA joint work plan 2013-2015 to encourage information sharing to assist in the conservation of migratory species along all the world's flyways and to assist cooperation with non-Arctic countries on these issues, and *welcoming* the Arctic Migratory Bird Initiative and its associated Work Plan;

Noting with gratitude the work undertaken by the Working Group on Flyways at its meetings in Jamaica (11-14 March 2014) and Germany (30 June 2014) and during the whole intersessional period and *acknowledging* the generous financial contributions provided by the Government of Switzerland as well as the contribution of Working Group members towards the successful completion of these meetings and their outputs; and

Thanking the Government of Jamaica for hosting the Flyways Meetings held on 11-14 March 2014 in Trelawney, and the Governments of Canada and Switzerland, the Organization of American States (OAS), WHMSI and the CMS Secretariat for co-organizing and sponsoring these meetings;

*The Conference of the Parties to the
Convention on the Conservation of Migratory Species of Wild Animals*

1. *Adopts* the “Programme of Work on Migratory Birds and Flyways 2014-2023” (the POW) included as Annex 1 to this Resolution and *urges* Parties and signatories to CMS instruments, and *encourages* non-Parties organizations and stakeholders to implement the POW as a rolling Programme of the Convention as a matter of priority;
2. *Adopts* the “Americas Flyways Framework” included as Annex 2 to this Resolution and *urges* CMS Parties and signatories to CMS instruments in the Americas, and *invites* non-Parties, organizations and stakeholders to implement the Framework in collaboration with WHMSI to protect migratory birds and their habitats throughout the Western Hemisphere;
3. *Instructs* the Secretariat, in collaboration with Parties and relevant stakeholders and subject to the availability of resources, to implement those activities assigned to it in the POW, e.g. organizing regional or thematic workshops to address specific issues and promote the implementation of the POW and the Americas Flyways Framework, and sharing best practice and lessons learnt in the effective conservation of flyways and migratory birds and their habitats;
4. *Calls on* Parties to effectively implement the POW and *invites* non-Parties and other stakeholders, with the support of the Secretariat, to strengthen national and local capacity for flyway conservation including, *inter alia*, by developing partnerships with key stakeholders and organizing training courses; translating and disseminating documents, sharing protocols and regulations; transferring technology; designating and improving management of critically and internationally important sites; understanding the ecological functionality of flyways through research of migratory birds and their habitats; strengthening monitoring programmes; and promoting the conservation of migratory birds and ensuring all use of migratory birds;
5. *Requests* Parties, GEF, UNEP and other UN organizations, bilateral and multilateral donors, the private sector and others to provide financial assistance for the implementation of this Resolution, the POW and the Americas Flyways Framework including to developing countries for relevant capacity building and conservation action;
6. *Further requests* the continuation of the open-ended Flyways Working Group to (a) monitor the implementation of the POW and the Americas Flyways Framework (b) review relevant scientific and technical issues, international initiatives and processes, (c) provide guidance on and input into the conservation and management of flyways at global and flyway

level during the intersessional period until COP12 and (d) review and update the POW, as a basis for the continued prioritization of the CMS activities on flyways;

7. *Encourages* Parties to promote the POW and the Americas Flyways Framework as a global tool to contribute to achieving the Aichi Targets in relation to conservation of migratory species and their habitats and to ensure a strong level of support for its implementation by working closely with the Convention on Biological Diversity;

8. *Requests* the Secretariat to liaise with the secretariats of CMS instruments, relevant MEAs, international organizations, international conservation initiatives, NGOs and the private sector to promote synergies and coordinate activities related to the conservation of flyways and migratory birds including, where appropriate, the organization of back-to-back meetings and joint activities;

9. *Further requests* the Secretariat to strengthen links with the Secretariat of the Arctic Council's Working Group on the Conservation of Arctic Flora and Fauna (CAFF), in the framework of the existing Resolution of Cooperation, especially to ensure that the CAFF Arctic Migratory Bird Initiative (AMBI) has maximum synergies with the POW to capitalize on the flyway approach in gaining global support for the conservation of the arctic environment; and

10. *Calls on* Parties and the Scientific Council to report progress in implementing this resolution, including monitoring and efficacy of measures taken, to COP12 in 2017.

PROGRAMME OF WORK ON MIGRATORY BIRDS AND FLYWAYS (2014-2023)

(Prepared by the Flyways Working Group, Version 6: 31 July 2014)

Table of Contents

1. Introduction
2. Purpose
3. Main Themes
4. Outcome Targets
5. Annex I: Details of Programme of Work
6. Annex II: Acronyms and Definitions
7. Annex III: List of CMS bird instruments and processes
8. Diagram representation of all CMS family avian-related instruments

1. Introduction

Migratory birds represent one of the great elements of world's biodiversity and genetic diversity. They are found in all terrestrial and marine ecosystems around the world and are adapted to using natural and manmade habitats. Migratory bird species are exposed to a range of different factors, both natural and anthropogenic, in their annual cycles and throughout their flyways. As a consequence, a significant proportion of migratory species are declining, with some species increasingly threatened with extinction. Besides their amazing beauty and variety, they also provide a wide range of ecosystem services. Their multidimensional connectedness gives them a special role as ecological keystone species and indicators of the linkages between ecosystems and of ecological change.

It is widely recognised that the completion of the annual cycle of these birds strongly depends on national action that can be supported and strengthened by international cooperation. Ensuring their conservation worldwide is a major focus of the Convention on Migratory Species. CMS Resolution 10.10 on *Guidance on Global Flyway Conservation and Options for Policy Arrangements* and a number of other CMS resolutions, directly or indirectly are linked to supporting/achieving conservation and management action for the migratory birds and their habitats, monitoring, reducing threats and increasing resources to implement these activities.

Moreover, to promote action for migratory birds and other migratory species, the CMS is developing a Strategic Plan for Migratory Species 2015-2023 (SPMS) with these following five goals:

- Goal 1: Address the underlying causes of decline of migratory species by mainstreaming relevant conservation and sustainable use priorities across government and society
- Goal 2: Reduce the direct pressures on migratory species and their habitats
- Goal 3: Improve the conservation status of migratory species and the ecological connectivity and resilience of their habitats
- Goal 4: Enhance the benefits to all from the favourable conservation status of migratory species
- Goal 5: Enhance implementation through participatory planning, knowledge management and capacity building

These goals are based on the Strategic Plan for Biodiversity and its Aichi Targets approved by Parties of the Convention on Biological Diversity. Two of the Aichi Targets (Targets 11 and 12) are particularly relevant to migratory birds.

All of the 16 targets of the SPMS are relevant to the Programme of Work on Migratory Birds and Flyways (POW).

The aim is to bring together into a single Programme of Work for the world's flyways all the major actions required to promote the conservation of migratory birds and their habitats. This POW aims to focus on the migratory birds rather than on the Convention itself, in keeping with the aim of the Strategic Plan of Migratory Species, its goals and targets. The aim is also to encourage cooperation and streamlining of actions as well to avoid unnecessary duplication with existing thematic work programmes and other ongoing/planned initiatives within and outside of the CMS family.

2. Purpose

The overall purpose of the POW is to identify and promote implementation of activities at the international and national levels that will effectively contribute to an improvement in the status of migratory birds and their habitats worldwide. This should also achieve an improvement in migratory bird species throughout the world's flyways by:

- (a) Providing a framework for effective protection of migratory birds throughout their life-cycles; and
- (b) Enhancing synergies among relevant flyway-related instruments and programmes.

The POW is intended to assist Parties (and non-Parties) in establishing national programmes of work through identifying priority actions, indicators, key stakeholders and time frames. At a national level, Parties may select from, adapt, and/or add to the activities suggested in the POW according to particular national and local conditions and their level of development.

The POW also aims to promote synergies and coordination with relevant programmes of various international organizations, NGOs and the wider public. It therefore outlines priority activities directed at a range of various stakeholders according to their responsibilities/mandates and interests to work in collaboration for achieving the required outcomes.

Planning and implementation of actions require close communication and consultation with local communities to ensure the plans and actions adequately take into consideration local needs and priorities and benefit to local livelihoods.

3. Main themes

The POW is presented as six main themes; the first four themes are centred on improving conservation of birds and their habitats, while the latter two are to support their implementation.

- A. Ensuring Migratory Bird Conservation through Flyway/ Ecological Networks and Critical Sites and Habitats and Addressing Key Threats
- B. Flyway-specific Actions
- C. Enhancing knowledge to support flyway conservation

- D. Awareness raising
- E. Monitoring and reporting
- F. Resourcing implementation

The accompanying Annex I provides details of the priority actions, indicators, proposed time frames, CMS family instruments (Agreements, MoUs, Action Plans and Working Groups) and other key stakeholders.

4. Outcome targets – by 2023

All flyway range states have:

- Become signatories to MoUs and Agreements relevant to the POW in their flyways
- Strengthened capacity to implement the POW
- Raised awareness of target audiences on the importance of conservation measures for migratory birds and their habitats
- Developed plans/processes to put the POW into effect (according to their national circumstances and needs) and incorporated these into National Biodiversity Strategies and Action Plans and/or other national planning frameworks for migratory species/habitat management
- Secured the necessary finance and made substantial progress in POW implementation

CMS Secretariat has:

- Organized capacity building workshops to strengthen the Parties' capacity to implement the POW
- Facilitated securing of financial resources to enable Parties and other implementing partners to implement the POW
- Facilitated synergies with Secretariats/bodies of other Conventions and other partners and stakeholders to implement the POW at flyway and national levels

5. Annex I: Details of the Programme of Work on Migratory Birds and Flyways

6. Annex II: Glossary of Definitions and Acronyms

Definitions

Explanatory notes:

1. The Programme of Work uses specific terms related to migratory species and habitat conservation for which definitions and explanatory notes are considered useful.
2. The definitions are drawn from existing documentation from within the CMS family having been developed for one or more migratory bird groups. In the absence of a comprehensive and standardised set of CMS definitions, some of these definitions and guidance have been adapted from other international processes.
3. It is noted that a number of these terms have also been defined at a national level. As these may vary within and between national jurisdictions, their application at the global/international level needs to be agreed.
4. There remains a need for these terms to be defined and standardised for the CMS purposes.
5. The following definitions and explanatory notes are provided to explain various terms related to migratory species and habitat conservation used in the Programme of Work are not aimed at being definitive.

Biodiversity Offsets - measurable conservation outcomes of actions designed to compensate for significant residual adverse biodiversity impacts arising from project development after appropriate prevention and mitigation measures have been taken (definition as per Business and Biodiversity Offsets Programme (BBOP)).

Critical habitat - Any area of the planet with high biodiversity conservation significance based on the existence of habitat of significant importance to critically endangered or endangered species, restricted range or endemic species, globally significant concentrations of migratory and/or congregatory species, highly threatened and/or unique ecosystems and key evolutionary processes. (Definition as per [International Finance Corporation \(IFC\) 2012](#)).

Critical site - Criteria have been developed for the AEW region from the relevant Ramsar and IBA criteria in order to address the identification of networks of Critical Sites for waterbirds populations during those stages of their annual cycles when the site-based conservation approach is effective. A site has been identified as ‘critical’ if it fulfils at least one of the two CSN criteria: CSN criterion 1: The site is known or thought regularly or predictably to hold significant numbers of a population of a globally threatened waterbird species. CSN criterion 2: The site is known or thought regularly or predictably to hold >1% of a flyway or other distinct population of a waterbird species (definition as per AEW Wings over Wetlands project).

Note: the critical site definition developed for migratory waterbirds will need to be expanded to cover migratory birds.

Flyway - A flyway is taken to be a geographical region within which a single migratory species, a group of migratory species, or a distinct population of a given migratory species, completes all components of its annual cycle (breeding, moulting, staging, non-breeding “wintering” etc.) (Boere & Stroud 2006⁷).

⁷ Boere, G.C. & Stroud, D.A. 2006. The flyway concept: what it is and what it isn't. *Waterbirds around the world*. Eds. G.C. Boere, C.A. Galbraith & D.A. Stroud. The Stationery Office, Edinburgh, UK. Pp. 40-49. (www.jncc.defra.gov.uk/PDF/pub07_waterbirds_part1_flywayconcept.pdf).

Each individual species and population migrates in a different way and uses a different suite of breeding, migration staging and non-breeding (wintering) sites. Hence a single flyway is composed of many overlapping migration systems of individual bird populations and species, each of which has different habitat preferences and migration strategies. From knowledge of these various migration systems it is possible to group the migration routes used by birds into broad flyways, each of which is used by many species, often in a similar way, during their annual migrations. Recent research into the migrations of many wader or shorebird species, for example, indicates that the migrations of waders can broadly be grouped into eight flyways: the East Atlantic Flyway, the Mediterranean/Black Sea Flyway, the West Asia/Africa Flyway, the Central Asian Flyway, the East Asia/Australasia Flyway, and three flyways in the Americas and the Neotropics.

There are no clear separations between flyways, and the use of the term is not intended to imply major biological significance; rather it is a valuable concept for permitting the biology and conservation of birds, as well as other migratory species, to be considered in broad geographical units into which the migrations of species and populations can be more or less readily grouped. (definition adapted from Ramsar Resolution XI.8. Annex 2).

Habitat - means any area in the range of a migratory species which contains suitable living conditions for that species (definition as per CMS).

Internationally important site – A site should be considered internationally important if it regularly supports 1% of the individuals in a population of one species or subspecies of waterbird or if it regularly supports 20,000 or more waterbirds (definition as per the Ramsar Convention). This Criterion identifies those wetlands which are of numerical importance for waterbirds through their support of internationally important numbers, either of one or more species, and often the total numbers of the waterbird species assemblage. Note: the definition has been developed for waterbirds and there is a need for it to be expanded to cover and quantified to cover other migratory birds.

Migratory species - Migratory bird species means the entire population or any geographically separate part of the population of any bird species, a significant proportion of whose members cyclically and predictably cross one or more national jurisdictional boundaries (definition as per CMS).

Net Positive Impact (NPI) - a target for project outcomes in which the impacts on biodiversity caused by the project are outweighed by the actions taken, in accordance with the Mitigation Hierarchy, to achieve net gains for biodiversity (Definition as per NPI Alliance).

Priority species – migratory bird species included under CMS Appendix I for concerted action, or on the IUCN Red List of globally threatened species (Critically endangered, Endangered or Vulnerable) that have not been so far listed under CMS.

Protected area - is a clearly defined geographical space, recognised, dedicated and managed, through legal or other effective means, to achieve the long term conservation of nature with associated ecosystem services and cultural values (IUCN definition 2008).

Site – A geographical area on land or in water with defined ecological, physical, administrative, or management boundaries that it is actually or potentially manageable as a single unit (e.g. a protected area or other managed conservation unit).

For this reason, large-scale conservation priority regions such as Ecoregions, Endemic Bird Areas, and Biodiversity Hotspots, which often span multiple countries, are not considered to be sites. In the context of Key Biodiversity Areas (KBA), “site” and “area” are used interchangeably.

Site Network/Ecological Network – A collection of individual sustainably managed sites operating cooperatively and synergistically, both ecologically and administratively, to achieve ecological and governance benefits for migratory birds that single protected sites cannot achieve in isolation (Modified from the CMS IOSEA guidance document; see also CMS/ScC18/Doc.10.3.1 for further information).

**AMERICAS FLYWAYS FRAMEWORK:
A FRAMEWORK FOR THE CONSERVATION OF MIGRATORY BIRDS
IN THE AMERICAS**

(Prepared by the Western Hemisphere Migratory Species Initiative, April 2014)

Preamble

Recalling CMS Resolution 10.10 to develop “in close partnership with existing flyway organizations and initiatives in the Americas, and in particular the Western Hemisphere Migratory Species Initiative (WHMSI), an overarching conservation Action Plan for migratory birds in the Americas, recognizing especially the established programmes of work and taking into account existing instruments”;

Taking note of the CMS Flyways Working Group and WHMSI Americas flyways experts meeting (Jamaica, March 2014) to progress the development of an overarching conservation framework for migratory birds in the Americas;

Aware of the global Programme of Work on Migratory Birds and Flyways 2014-2023 being developed by CMS and that a framework for the Americas will make a significant contribution to delivering major parts of this Plan;

Recalling Article VII of the Convention on Nature Protection and Wild Life Preservation in the Western Hemisphere (the Western Hemisphere Convention) which states that “The Contracting Governments shall adopt appropriate measures for the protection of migratory birds of economic or aesthetic value or to prevent the threatened extinction of any given species.”;

Recalling the Ramsar Convention’s Resolution X.22 “Promoting international cooperation for the conservation of waterbird flyways” that “Strongly encourages Contracting Parties and other governments to actively support and participate in relevant international plans and programmes for the conservation of shared migratory waterbirds and their habitats”;

Acknowledging the work of the North American Bird Conservation Initiative (NABCI) and the Trilateral Committee for Wildlife and Ecosystem Conservation and Management to coordinate international efforts to conserve birds in North America; and acknowledging the increasing number of regional instruments for the conservation of migratory birds in Latin America and the Caribbean;

Acknowledging the large number of other initiatives that promote the conservation and management of migratory birds across the Americas, including the Western Hemisphere Shorebird Reserve Network, Waterbird Conservation for the Americas, Partners in Flight, Joint Ventures and other collaborative efforts to protect migratory birds;

Taking note of the Atlantic Flyway Shorebird Conservation Business Strategy and an increasing number of other conservation business plans in development that have the potential to deliver effective flyway scale conservation of priority migratory birds;

Taking note of the Plan of Action adopted by the Heads of State and Government at the III Summit of the Americas (Quebec City, 2001) that calls for “the development of a hemispheric strategy to support the conservation of migratory wildlife throughout the Americas, with the active engagement of civil society”;

Taking note of the Inter-American Program for Sustainable Development, which calls upon the Organization of American States (OAS) and member states “to explore the development of the Western Hemisphere Migratory Initiative (WHMSI), in a manner that reflects the interests and priorities of all member states”;

Acknowledging the work of the Western Hemisphere Migratory Species Initiative (WHMSI) to bring together governments and civil society from throughout the Americas to advance the conservation of shared migratory species, and in particular the action plan developed for “Integrating Migratory Bird Conservation Initiatives in the Americas”;

Therefore it is recommended by the WHMSI Steering Committee that the following framework be adopted by the relevant Parties of CMS and other interested stakeholders, and pursued by them in collaboration with WHMSI to conserve migratory birds and their habitats throughout the Western Hemisphere.

Americas Flyways Framework

The Americas Flyways Framework is provided to assist governments, non-profit organizations, research institutions, corporations and citizens in the conservation of migratory birds and their habitats in the Western Hemisphere.

The Americas Flyways Framework builds upon the five goals of the draft CMS Strategic Plan for Migratory Species 2015-2023:

- Goal 1: Address the underlying causes of decline of migratory species by mainstreaming relevant conservation and sustainable use priorities across government and society
- Goal 2: Reduce the direct pressures on migratory species and their habitats
- Goal 3: Improve the conservation status of migratory species and the ecological connectivity and resilience of their habitats
- Goal 4: Enhance the benefits to all from the favourable conservation status of migratory species
- Goal 5: Enhance implementation through participatory planning, knowledge management and capacity building

These goals are based on the Strategic Plan for Biodiversity and its Aichi Targets approved by Parties of the Convention on Biological Diversity, and in particular Aichi Targets 11 and 12.

The Strategic Goals of the Americas Flyways Framework comprise both aspirations for achievement at the hemispheric level, and a flexible framework for the establishment of national and regional targets. Governments and other stakeholders are invited to set their own targets within this flexible framework to advance the conservation of migratory birds in the Western Hemisphere, taking into account the interconnectedness of migratory bird life cycles and also bearing in mind national contributions to the achievement of hemispheric targets.

Flyways of the Americas seeks to harmonize the conservation efforts of governments and all relevant partners and stakeholders by advancing the following:

Strategic Goal 1. Mainstream biodiversity and migratory bird protection and conservation across government and society.

- **Action 1. Ensure active cooperation, coordination and reporting among migratory bird instruments, initiatives and partnerships**

Encourage and facilitate closer cooperation among those instruments, initiatives and partnerships relating to migratory birds, and the habitats upon which they depend, seeking efficiencies, minimizing redundancies, and focusing on and addressing specific threats to halt the decline in the populations of migratory birds. Promote and integrate biodiversity values and the value of migratory birds into national and local development and poverty reduction strategies and planning processes and incorporate into national accounting, as appropriate and reporting systems.

- **Action 2. Promote collaboration with other environmental instruments**

Encourage and facilitate closer collaboration with other environmental instruments (not focused on migratory birds), to build upon synergies and ensure that the requirements of migratory birds are integrated within appropriate policies, tools and initiatives. Develop and apply positive incentives for the conservation and sustainable use of biodiversity and migratory bird, consistent and in harmony with relevant international obligations.

- **Action 3. Promote collaboration with other sectors**

Promote the collaborative conservation of migratory birds by working with other bodies whose prime objective is not wildlife conservation, including the private sector, to ensure that the requirements of migratory birds are integrated into land-use and maritime policies, operational guidance, safeguard and mitigation policies, and to identify and promote best practices in protection, management and sustainable use.

- **Action 4. Build awareness**

Promote, communicate and raise awareness of the ecological, economic and cultural importance of migratory birds throughout the hemisphere among all governments and society as a whole. Ensure that people are aware of the values of biodiversity and the steps they can take to conserve and use them sustainably. Promote public awareness campaigns and other relevant activities to increase the participation of civil society in the conservation of migratory birds.

Strategic 2. Reduce the direct pressures and threats on migratory birds and promote sustainable and productive landscapes, seascapes, land use and ocean use that benefit migratory bird populations.

- **Action 5. Promote sustainable and productive landscapes and seascapes that are compatible and beneficial to migratory bird populations**

Work with private landowners, governments, producers and land and marine use planners to promote sustainable and compatible land and seascapes. Ensure that areas under agriculture, aquaculture, forestry and fisheries are managed sustainably, ensuring the conservation of biodiversity and migratory birds. Develop regulations, ecosystem service payment mechanisms, corporate engagement and beneficial incentives to promote bird-friendly landscapes.

- **Action 6. Assess and mitigate significant human-caused threats to bird migration**

Identify and assess the significant threats to migratory birds and promote and foster efforts to reduce or eliminate these threats, especially in relation to enforcement regarding illegal killing, taking and trade, poisoning, and energy production, transmission and distribution.

- **Action 7. Promote sustainability of hunting harvests and other uses and takes of migratory birds, when they may occur**

Develop sustainable and controlled hunting management when hunting is permitted, and ensure other takes of migratory birds, eggs, and bird resources are sustainable and guided by sound scientific research and regulations.

- **Action 8. Mitigate and adapt to impacts of climate change on migratory bird species**

Support efforts to reduce emissions and capture carbon, and take action to mitigate and adapt to the impacts of climate change on migratory bird species, including enhancing the resilience of sites to climate change and planning for the potential for shifts in the range of bird species.

Strategic Goal 3. Protect migratory birds and the phenomenon of migration by safeguarding species, genetic diversity, ecosystems and critical habitat areas

- **Action 9. Halt extinctions by addressing the needs of the most imperilled migratory bird species**

Prevent the extinction or extirpation of migratory bird species by developing conservation programs and initiatives for those species most known to be threatened, including bird species on the IUCN Red List (including those listed as Alliance for Zero Extinction species) and other species in dramatic decline.

- **Action 10. Foster the conservation of high priority sites and habitats, including networks of protected areas**

Identify and protect effective ecological networks of sites and habitats critical for the conservation of migratory bird species. Ensure that information on migratory bird species, high-priority sites and habitats is readily available. Encourage the use of formal designations, voluntary measures and agreed site management plans as appropriate to protect and manage all critical sites. Foster trans-boundary collaboration, flyway networks, effective coalitions of partners and sound and effective site management. Work with conservation initiatives and conservation business plans to guide conservation and deliver results to key sites and habitats. Recognize the interconnectedness and transnational nature of migratory bird conservation and encourage coordination between countries and all parties.

Strategic Goal 4. Enhance the benefits to all from biodiversity, ecosystem services and migratory birds

- **Action 11. Promote livelihoods that are consistent with and enhance migratory bird conservation**

Promote the development of livelihoods (for example: ecotourism, sustainable and bird-friendly agriculture, agroforestry, etc.) that will lead to a productive economy and contribute positively to the protection and preservation of migratory bird populations and the phenomenon of hemispheric-wide migration. Encourage governments, businesses and other stakeholders to take steps to implement plans for sustainable production and consumption of natural resources. Ensure that ecosystems that provide essential services, including services relating to water and climate regulation, and contribute to health, livelihoods and well-being, are restored and safeguarded, taking into account the needs of women, indigenous and local communities, and the poor and vulnerable

- **Action 12. Empower local communities to conserve their resources**

Empower local people and communities (including indigenous and traditional peoples) and provide them with the tools, knowledge and means to enable them to protect and manage their natural resources for the benefit of mankind, their communities, birds, and biodiversity as a whole.

Strategic Goal 5. Enhance implementation through participatory planning, knowledge management and capacity building

- **Action 13. Promote comprehensive biological planning**

Promote the identification of priority bird species and sites for conservation action; develop/update full lifecycle conservation business plans as appropriate; foster the building of coalitions of partners to implement priority actions.

- **Action 14. Improve/increase and share knowledge**

Ensure that knowledge, the science-base and technologies relating to migratory birds, their values, functions, status and trends, and the consequences of their loss, are improved, widely shared, transferred, and applied. Enhance and strengthen monitoring of the status of migratory bird populations and migratory bird habitats and sites; ensure that regular reporting is made widely available. Support targeted research to understand the ecology of priority migrants throughout their lifecycles, identifying the limiting factors barriers and threats and the policies and prescriptions necessary to address these.

- **Action 15. Build capacity**

Strengthen collaboration and support between local, national and regional partners and build capacity for flyway-scale conservation including the strengthening of local and national capacity along critical points on the flyways. Share best practices, lessons learnt, relevant scientific and technical issues, international initiatives and processes, and provide guidance and input to the conservation and management of flyways at local, national, regional and flyways levels.

- **Action 16. Help guide funding to priority needs**

Seek new and expand existing funding sources (both public and private) to generate the funds needed to resource migratory bird conservation at the flyway scale. Mobilize financial resources for the effective implementation of the Americas Flyways Framework.

Implementation and Participation

The Americas Flyways Framework is being promoted by WHMSI, an overarching framework to guide and coordinate conservation effort for the protection of migratory birds and the phenomenon of migration in the Americas. The framework will require cooperation and collaboration of governments, corporations, non-profits and other interested stakeholders.

All interested parties are encouraged to use the Americas Flyways Framework to guide their work to protect migratory birds. To establish a specific mechanism to advance the framework, WHMSI proposes to establish a voluntary, collaborative partnership: **“The Partnership for the Americas Flyways Framework”** (PAFF) and will formally invite the participation of CMS and its signatories, the governments of the Western Hemisphere, and national and international non-profit organizations and other leading stakeholders to join this partnership.

The basic principles of PAFF are still under development, but are currently proposed as follows:

Legal Status: PAFF will be informal and voluntary.

Purpose, Goals and Objectives: PAFF will provide a mechanism to promote dialogue, cooperation, collaboration and coordination among a wide range of stakeholders, both public and private, to advance the Strategies and Actions of the Framework. Such actions will include sharing information, developing strategies and collaborative work efforts to advance implementation of the Framework, and report on successes, needs and opportunities over time.

PAFF will develop an implementation document that outlines periodic priorities. Additionally, governments can be invited to develop national implementation plans; NGOs can be invited to participate and develop plans as appropriate. Convention Secretariats can be invited to update their joint work plan and other frameworks to support its implementation. International initiatives can be invited to develop implementation plans; and Corporations can be invited to develop plans, either individually or jointly.

Membership: Membership and participation in PAFF is voluntary and Partners can withdraw with notice.

CMS may join PAFF or adopt this Framework by endorsing the text and supporting the objectives and actions of the Americas Flyways Framework. Governments, NGOs, and other interested stakeholders may join this Partnership and Framework by endorsing the text, supporting the objectives and actions of the Americas Flyways Framework and notifying WHMSI. Membership is open to new participants and new members are encouraged. WHMSI will alert all exiting Partners of any new applicants and if no issues or objections are raised within 60 days of the participant's application, the applicant will be added to the list of Partners.

Administration: Initially, WHMSI will oversee the establishment and administration of PAFF, including through the appointment of an initial team of coordinators to act on behalf of PAFF.

A Steering Committee will be formed to assist WHMSI and oversee the operations of PAFF. The Steering Committee will be composed of representatives from governments as well as the non-profit and private sectors, as determined by PAFF in its initial meeting.

Communication between and among Partners will be encouraged, and an *annual meeting*, will be organized either virtual or in-person, by WHSMI and the Steering committee.

The Partners will elect a *Chair* and *Vice-chair* to a term of two years. Positions for other officers may be identified and created by the Steering Committee.

PAFF will establish *advisory groups* and *ad hoc working groups* to develop action plans and address issues as needed. These advisory and working groups will provide a key mechanism for implementing action, recruiting new participants and supporters to the Framework, communicating among Partners, and identify new needs and opportunities to protect migratory birds in the Western Hemisphere.

Finance: Partners are encouraged to provide or secure resources to support the activities of PAFF and to advance the Framework.
