

Memorandum of Understanding on the Conservation and Management of Marine Turtles and their Habitats of the Indian Ocean and South-East Asia

Distr. GENERAL

MT-IOSEA/SS.3/Doc. 5 Agenda item 6

15 March 2005

THIRD MEETING OF THE SIGNATORY STATES Bangkok, 29-31 March 2005

REPORT OF THE SECRETARIAT

1. The present report covers the activities of the Secretariat from the end of the Second Meeting of the Signatory States (Bangkok, 16-19 March 2004) until mid-March 2005. The main issues covered include: staffing, recruitment of Signatory States, substantive activities undertaken and planned, subregional coordination/interagency cooperation, project oversight, and meetings attended.

General / Secretariat staffing

- 2. The IOSEA Secretariat remains co-located with the UNEP Regional Office for Asia and the Pacific (UNEP/ROAP) in the United Nations building in Bangkok. The administrative arrangements continue to run smoothly, and the support received from both UNEP/ROAP and ESCAP in relation to administrative issues has been conducive to a very productive work environment.
- 3. In April 2005, the Secretariat will be moving to the 2nd floor of the UN building, as part of a general rearrangement of office space. Situated next to the recently rejuvenated East Asian Seas Regional Coordinating Unit, the new location should facilitate closer links to that body. It is hoped that the move can be accomplished with a minimum of disruption to regular activities and communications. Signatory States will be advised in due course of any necessary changes to telephone or fax numbers.
- 4. The Secretariat continues to be staffed by one full-time officer (Coordinator/Senior CMS Advisor) supported by a volunteer "Youth Ambassador" funded through the Australian Agency for International Development (AusAID). The Coordinator was able to secure a first Youth Ambassador placement which ran from mid-March 2004 to mid-February 2005. The incumbent, Ms. Louisa Perrin, provided invaluable assistance during that time, particularly in relation to maintenance of the IOSEA website. On the strength of the positive experience for both parties, the Secretariat submitted an application for another Youth Ambassador which has recently been approved. The chosen candidate (Ms. Sarah Yip) is expected to come on board during the week of the Meeting of the Signatory States.
- 5. In view of the additional activities that the Secretariat expects to take on in the second half of 2005 and in 2006, in relation to the Year of the Turtle campaign, the Secretariat has applied for another volunteer through the same programme. If the application is successful, that individual would begin work in September/October 2005. In any case, this generous in-kind support for the IOSEA MoU provided by the Government of Australia is greatly appreciated and is worthy of special acknowledgment.
- 6. In January 2005, the Secretariat began advertising through the IOSEA website its willingness to accept interns for periods of three to six months. Apart from contributing to the work of the IOSEA Marine Turtle MoU, the unremunerated internship programme offers a good opportunity for young people to become acquainted with the work of the United Nations, and to experience a multi-cultural environment.

- 7. One such intern was accepted in mid-February (bridging the gap between the two Youth Ambassador placements) and has already made a valuable contribution in a short time to the organisation of the present meeting. The Secretariat has received several other serious applications for internships, at least two or three of which can be expected to materialise over the coming year.
- 8. Keeping within the limited budget for the Secretariat's operations, a part-time secretary was recruited last year to assist with basic secretarial tasks until October 2004; more recently another secretary "borrowed" occasionally from another UNEP officer away on extended sick leave has helped with the logistics of the present meeting. It is hoped that the budget will allow for a replacement secretary to be recruited in April-May 2005 under a similar part-time arrangement.
- 9. Overall, the Secretariat has made judicious use of the limited finances available, and has been successful in securing additional human resources at no cost, through various temporary arrangements. Document MT-IOSEA/SS.3/Doc. 11 addresses the additional direct voluntary financial support provided by a number of Governments.

Recruitment of Signatory States

- 10. In the twelve months since the Second Meeting of the Signatory States, the Memorandum of Understanding has taken effect in another four Range States: Jordan (1 June 2004), Oman (1 June 2004), Thailand (1 August 2004) and Pakistan (1 October 2004). Additionally, the MoU will take effect for South Africa on 1 May 2005, bringing to 21 the number of States participating in the MoU. While this year-on-year growth in membership is satisfying, it is hoped that at least another 5 or 6 States will have signed the MoU before the Fourth Meeting.
- 11. Over the past year, the Coordinator has solicited almost all potential Signatory States through direct personal contacts and/or in writing with a view to encouraging their signature of the Memorandum of Understanding. The table at Annex 1 summarises the efforts that have been made in this regard. Time and budget constraints have hampered this work, but much has already been done with limited means; and hopefully more effort can be devoted to recruitment activities in the coming year. Participants are invited to make use of this information to initiate their own follow-up with the individuals/agencies concerned.
- 12. It is disappointing that a number of States whose representatives made definitive statements at the Second Meeting about signing the Memorandum in the near future have yet to finalise the necessary domestic arrangements. They include India, Indonesia, Malaysia and Papua New Guinea. It is hoped that further information will be forthcoming if they attend the present meeting as observers.

Depositary functions

13. The text of the Memorandum of Understanding, including the Conservation and Management Plan (CMP), has been circulated and posted on the IOSEA MoU Website in the three official languages: Arabic, English and French. The Secretariat has also secured unofficial translations of the MoU and CMP texts in Farsi (Persian), Khmer, Thai and Vietnamese and has made these available on the website. The Secretariat would be interest to know if anyone is aware of the existence of translations into any another language.

Substantive activities undertaken

14. The following section summarises the main activities in which the Secretariat has been involved over the past year:

- 15. The Secretariat has continued to play a central role facilitating exchange of information within the IOSEA region, and this has been achieved primarily through the IOSEA website (www.ioseaturtles.org). A new "Profile of the Month" has been added to the site every month since April 2004, the titles of which are given in Annex 2. Additionally, about 40 features have been added to the homepage since March 2004 with information on project activities, national implementation arrangements, newsworthy events, meeting announcements, new publications etc. (Annex 3). Over that same period, links were made to more than 110 individual news stories concerning marine turtle and habitat conservation in and around the IOSEA region (Annex 4). Making use of a web-trawling facility since November 2004, the website has become a dynamic vehicle for consolidating information from English language media throughout the IOSEA region. The coverage of the Indian Ocean tsunami disaster was particularly comprehensive.
- 16. A service was initiated in December 2004 to send out monthly e-mails summarising changes made to the website over the previous month, in the form of a "What's New on the Site" announcement. This innovation has been well received, especially by those who might not visit the site regularly, and the subscription list is growing steadily. A semi-automated archive system allows users to consult material they may have overlooked in the past.
- 17. The electronic library continues to be populated with useful reference material. For example, it now contains summaries (as pdf handouts) of more than 20 informative PowerPoint presentations delivered at various meetings and workshops (Annex 5); and details of more than 30 useful publications of various kinds. A new education section allows users to download booklets and posters that have been made freely available. Elsewhere on the site, a new facility has been added to display information about the flipper tag series used in countries around the IOSEA region. At present, there is information from 15 countries Signatories and non-Signatories alike. A background paper prepared by Advisory Committee member Dr. Jeanne Mortimer, gives the rationale for the approach that is being advocated.
- 18. Various aspects of the website are in need of review and/or updating, such as the list of "Useful Contacts and "Links" to other relevant websites. These and other potential improvements are described in more detail in document MT-IOSEA/SS.3/Doc. 12 "Further development of implementation tools".
- 19. Three aspects of the IOSEA website fulfil a greater role than simply facilitating exchange of information. The Online Reporting Facility, finalised in 2004, represents a huge advance in the way that information from Signatory States is gathered, consolidated and analysed for management purposes. Almost all of the Signatory States have submitted reports, which are available for public viewing in their entirety or as part of specialised queries. The Online Report Viewer allows users to view and query the contents of all national reports interactively for example, according to: a particular country, any of the four IOSEA sub-regions, any of the six MoU thematic objectives, and any one of about 100 individual activities. In addition, about 225 discrete sites of relevance to marine turtles have been identified, and the intensity of about 15 potential threats at each site has been rated all of which can be queried interactively. Though a few technical improvements have yet to be introduced, the basic system has proven its effectiveness, as evidenced by the relative ease with which it was possible to produce a report analysing over 100 different aspects of implementation in nearly 20 countries (Document MT-IOSEA/SS.3/Doc. 7.2).
- 20. The IOSEA Interactive Mapping System (IMapS), a collaborative venture with UNEP-WCMC, was formally launched in February 2004. With its detailed maps of marine turtle nesting from around the IOSEA region, and overlays of important coral reef, mangrove and sea grass habitats, the IMapS remains at the forefront of this kind of interactive management tool. While the underlying data have not been updated as frequently as had been hoped over the past year, the Secretariat has initiated discussions with UNEP-WCMC and the Advisory Committee about a protocol that would allow individual users to input data, subject to a rigorous screening process.

21. Finally, the Online Projects Database now contains detailed descriptions of more than 40 project activities in 16 countries around the region. The Secretariat has made a concerted effort to solicit and compile the information from a wide range of sources. Though there are numerous project activities still not included in the system, an excellent start has been made in the first year to establish the database. In addition to supplementing the content, further technical improvements are planned for 2005-06.

Marine turtle site network proposal

22. At the second Meeting of the Signatory States, the Secretariat introduced an outline of a concept to develop a network of sites of importance for marine turtles, linked to the IOSEA MoU. The Secretariat has worked over the past year to develop the proposal, a first draft of which was circulated in June 2004 to the Advisory Committee and to a number of other individuals. The proposal has been revised and further elaborated in the light of comments received, and will be presented as Document MT-IOSEA/SS.3/Doc. 8.1.

Compilation of information on tsunami impacts

23. In the immediate aftermath of the December 2004 Indian Ocean tsunami, in response to requests for information on the status of marine turtle conservation projects around the Indian Ocean region, as well as the tsunami's impact on vital turtle habitats, the Secretariat compiled preliminary assessments of the affected countries. The information gleaned from a variety of sources, mostly in the public domain but not compiled in one place, has been periodically updated. The feedback received indicated that it was a useful source of information for those concerned about the fate of the various marine turtle conservation projects around the region. The impacts of the Indian Ocean tsunami are the focus of a separate paper, Document MT-IOSEA/SS.3/Doc. 9.

Year of the Turtle Campaign

24. The Second Meeting of the Signatory States welcomed the idea of organising a Year of the Turtle campaign in the IOSEA region in 2006, and participants undertook to consult – already in 2004 – about the funding and creative inputs needed and to organise an effective event two years hence. The Secretariat and the Advisory Committee have had little spare capacity to develop the overall concept further over the past year, however a number of ideas are reflected in Document MT-IOSEA/SS.3/Doc. 8.2 prepared for this meeting. In connection with the Year of the Turtle campaign, the Secretariat plans to develop some much-needed promotional materials, such as a brochure and fact sheets.

Project oversight

- 25. The Secretariat has been responsible for the initiation or oversight of a number of project activities / consultancies over the past year. They have included the following:
- Tracing the Migrations of Indian Marine Turtles: Towards an Integrated and Collaborative Conservation Program. Implementing agencies: Centre for Herpetology, Madras Crocodile Trust; and Wildlife Institute of India. USD 34,500 co-funding from the Convention on Migratory Species (CMS). Progress report is expected to be tabled under Agenda item 8c Document MT-IOSEA/SS.3/Doc. 7.3.
- Advancing Sea Turtle Conservation in Kenya. Implementing agency: Kenya Sea Turtle Conservation Committee. USD 16,450 co-funding from Government of United Kingdom, via CMS. Various administrative delays resulted in the funds for the initiation of this project being transferred only in January 2005. A preliminary report on steps already taken to begin the work is expected to be tabled under Agenda item 8c Document MT-IOSEA/SS.3/Doc. 7.3.

- Continuation of development work on the IOSEA website. IOSEA/UK Government funding.
 Online reporting facility was made operational in September 2004.
- Multi-lingual information/awareness booklet for longline fishers: "Catch Fish not Turtles, using Longlines". IOSEA/UK Government co-funding, together with UNEP Regional Seas Programme and other sponsors. Published/distributed by Blue Ocean Institute in August 2004 in English, Japanese and Spanish.
- Provision of tags and applicators to turtle projects in the Islamic Republic of Iran. Implementing Agency: Department of Environment, Wildlife Bureau. IOSEA/UK Government funding. Secretariat facilitated the purchase/delivery of 1000 tags and four applicators to support the initiation in 2004-05 of a useful tagging programme.
- Assistance in preparing technical summaries of national report database entries. IOSEA/UK Government funding. Used as basis for Document MT-IOSEA/SS.3/Doc. 7.2.

Facilitation of sub-regional coordination and inter-agency cooperation

- 26. Over the coming one to two years, the Secretariat hopes to co-opt existing bodies within each of the IOSEA MoU's four sub-regions to play an active role in facilitating implementation of the MoU on a sub-regional level. To that end, the Coordinator participated in a workshop held in Mombasa, Kenya, from 16-17 September 2004, jointly organised by the Kenya Sea Turtle Conservation Committee (KESCOM) and the Kenya Wildlife Service. The meeting was well-attended by representatives of most of the countries concerned, as well as other interested organisations.
- 27. The meeting acknowledged that the IOSEA Marine Turtle MoU provides a specific framework for marine turtle conservation in the Western Indian Ocean, as it is already operational and has been signed by most of the WIO States. The Nairobi Convention which has a broader remit for the management of East Africa's coastal and marine environment could provide additional political and potential financial support for the IOSEA MoU within this large sub-region.
- 28. The meeting proposed a formal link between the two instruments, to be achieved by establishing a WIO-IOSEA Marine Turtle MoU Task Force under the Nairobi Convention. The task force would serve explicitly to facilitate implementation of the IOSEA Marine Turtle MoU, while contributing to fulfilling the general programme of work of the Nairobi Convention. It was agreed that a proposal for interim recognition of this novel arrangement would be presented to the next meeting of Nairobi Convention Focal Points, now tentatively scheduled to take place in May 2005. If agreed there, the Nairobi Convention's Conference of the Parties would then be invited to formally confirm the decision when it meets in late 2006.
- 29. Already in 2003, the Secretariat initiated discussions with the South Asia Co-operative Environment Programme (SACEP) with a view to exploring a comparable role for SACEP in the Northern Indian Ocean sub-region. A number of actual and potential Signatory States attending the Second Meeting of the Signatory States in March 2004 took advantage of the opportunity to discuss how best to make use of limited funds to initiate some collaborative activity. However there was no consensus view among the participants on a way forward. Notwithstanding the two secretariats' interest to move this agenda along, there was no spare capacity to devote to this task in 2004. It is hoped that this initiative can be progressed in 2005.
- 30. Similar resource constraints have prevented the Secretariat from developing closer linkages with other bodies that might fulfil a similar role in other sub-regions, such as PERSGA in the Northwest Indian Ocean, and ASEAN (through its 1997 sub-regional sea turtle MoU) and/or SEAFDEC in South-East Asia. SEAFDEC is already making an important contribution to marine turtle conservation there, and it would be useful to explore the potential for aligning the two programmes more closely. Communication has also been initiated with the relevant Regional Fishery Body

(RFB) in the Indian Ocean – the Indian Ocean Tuna Commission (IOTC) – with a view eventually to promoting more involvement of that organisation in turtle by-catch mitigation.

Advisory Committee

31. Over the past year, the Secretariat has arranged for the integration of three additional members to the Advisory Committee, and has encouraged all members to provide feedback in their respective areas of expertise through regular e-mail contact. The work of the Advisory Committee is described in more detail in Document MT-IOSEA/SS.3/Doc.10, where suggestions are made on ways to enhance the Committee's inputs.

Meetings attended

32. Budget constraints limited the amount of travel that could be undertaken on behalf the IOSEA MoU over the past year; and several of the missions that were undertaken were combined with CMS-related activities (see below) in order to reduce costs. The Coordinator conducted six missions, as follows: Consultations on the marine turtle site network proposal (Washington, DC – July 2004); Asia-Pacific Fishery Commission meeting (Chiang Mai – August 2004); Workshop on sea turtle conservation (Terengganu, Malaysia – August 2004); Western Indian Ocean marine turtle workshop (Mombasa, Kenya – September 2004); 25th Annual Sea Turtle Symposium (Savannah, Georgia – January 2005); and the 26th Session of the FAO Committee on Fisheries (Rome – March 2005). As reported in Document MT-IOSEA/SS.3/Doc. 11, the total expenditure on the IOSEA-related travel in 2004 amounted to just over USD 10,000.

Convention on Migratory Species representation

- 33. Under the arrangement whereby the Convention on Migratory Species (CMS) makes a significant contribution to the operating costs of the Secretariat and to the organisation of the Meeting of the Signatory States, approximately 20 percent of the Co-ordinator's time is devoted to CMS work in the Asia region. Many of these activities have no direct relation to the IOSEA MoU, however there may be positive ancillary benefits from the contacts that have been established.
- 34. The Coordinator represented CMS at two meetings related to the CMS Siberian Crane MoU and its associated UNEP/GEF Siberian Crane/Wetlands project; an expert workshop on harmonisation of information management (where the IOSEA Online Reporting Facility was well-received); the 13th Meeting of the Conference of the Parties to CITES; the First Meeting of the Parties to the Agreement on Albatross and Petrels (ACAP); the 9th Meeting of the Asia-Pacific Migratory Waterbird Conservation Committee; and the 10th Meeting of the CBD Subsidiary Body on Scientific, Technical and Technological Advice. He recently attended a CMS strategic planning session which provided some extremely useful insights that are applicable to the IOSEA context.
- 35. Ideally, it would be advantageous to both CMS and IOSEA if an interested Government were to second a Junior Professional Officer to Bangkok for 2-3 years, as has been proposed in the past, who could devote more time to general CMS migratory species work, and also be available to assist with IOSEA MoU implementation. If time allows, later in 2005, the idea will be pursued again.

Preparations for the present meeting

- 36. The first announcement for the present meeting was circulated on 8 November 2004, with a request for completed registration forms to reach the Secretariat no later than 31 December 2004. Signatory States were requested at the same time to submit their nominations/re-nominations for the Advisory Committee by 28 January 2005.
- 37. For the most part, the Secretariat has had to rely on e-mail communication and periodic reminders to inform potential participants about the meeting the result being that the level of

attendance is expected to be comparable to that of the previous year. If more resources were available to promote the ongoing work of the IOSEA MoU and its relevance to other organisations and individuals around the Indian Ocean – South-East Asia region, the attendance would likely be considerably higher. For the time being, however, the minimum target of assuring the participation of nearly all of the Signatory States is being achieved.

Work programme for the year ahead

- 38. The work programme of the Secretariat will be shaped by the outcomes of the present meeting, and will depend on the decisions taken with respect to a number of agenda items. However, some core activities can already be identified which will demand attention, notably:
- Further development of the marine turtle site network proposal; and coordination of 2006 Year of the Turtle activities:
- Promoting and facilitating the establishment of sub-regional co-ordination mechanisms where these do not already exist, through increased contact with selected intergovernmental bodies;
- Developing closer linkages with non-governmental organisations, particularly those whose activities span several countries in the region;
- Developing new ties with regional fisheries bodies that have a critical role to play in managing marine turtle by-catch;
- More proactive awareness-raising among decision-makers not only in Signatory States, but also
 in non-Signatory Range States to encourage membership, as well as other States with an interest
 in the MoU taking more advantage of synergies arising from the co-location arrangement with
 the UNEP regional office;
- Further development of certain elements of the IOSEA website (discussed in more detail in document MT-IOSEA/SS.2/Doc. 12);
- Incorporating changes made to the national report template in the Online Reporting Facility; further analysis of the national reports, particularly the information on sites and threats, and identification of gaps in implementation/reporting;
- Overseeing timely implementation of a number of projects funded by CMS/IOSEA.

Action requested / expected outcome:

Signatory States are invited to note the report of the Secretariat, to seek any clarification that might be necessary, and to reflect on any additional activities that may warrant inclusion in the Secretariat's work programme over the coming year, subject to there being sufficient resources for implementation.

Summary of Secretariat recruitment efforts among non-Signatory States

| REGION/POTENTIAL SIGNATORY STATE | RECENT CONTACTS | REMARK | | |
|-------------------------------------|---|--|--|--|
| South-East Asia "plus" | | | | |
| Brunei Darussalam | Fisheries Department | SEASTAR2000, Dec. 2004 | | |
| Indonesia | Ministry of Forestry, Directorate General of Forest Protection and Nature Conservation | Registered to attend SS3 (no sponsorship available). Also: informal contacts with Conservation International (Dec. 2004), WWF-Indonesia (Mar 2005) | | |
| Malaysia | Dept. of Fisheries (DG; Marine Parks Division etc); Dept. of Wildlife and National Parks etc. – Terengganu workshop, August 2004 | Full briefing: Dept. of Fisheries, MITI, Foreign Affairs, Attorney General Chambers, SEAFDEC etc – July 2003 | | |
| Papua New Guinea | Dept of Environment and Conservation | Attended IOSEA SS2 Registered to attend SS3 (no sponsorship available) | | |
| Singapore | National Institute of Education, Nanyang Technological University | Registered to attend SS3 | | |
| Timor Leste | Ministry of Agriculture, Forestry and Fisheries, National Directorate for Fisheries and Aquaculture | Director of Fisheries Resources Management expected to attend SS3 | | |
| China | State Environmental Protection Administration, Department of International Cooperation | Sent letter 28 June 2004 (no reply) | | |
| Japan | Min. of Agriculture, Forestry and Fisheries – Fisheries Agency | FAO Technical Consultation, Dec. 2004; FAO COFI, March 2005 | | |
| Republic of Korea | Min. of Maritime Affairs and Fisheries – International Cooperation Office | FAO – A-P Fishery Com, Aug 2004 FAO Technical Consultation, Dec. 2004 | | |
| Northern Indian Ocean | | | | |
| India | Minister for Environment and Forests | Sent letter to Minister, 26 Nov 2004 (no reply) | | |
| Maldives | Ministry of Fisheries, Agriculture and Marine Resources – Marine Research Centre; Ministry of Environment | FAO Technical Consultation, Dec. 2004; CBD SBSTTA, Feb 2005 | | |
| Northwest Indian Ocean | | | | |
| Bahrain | - | No recent contact | | |
| Djibouti | Ministere de l'habitat, de l'urbanisme, de l'environnement et de l'amenagement du territoire | Directeur de l'Environnement registered to attend SS3 (no sponsorship available) | | |
| Egypt | Min. of State for Environmental Affairs – Environmental Affairs Agency | CBD SBSTTA, Feb 2005 Director, Nature Conservation Sector registered to attend SS3 | | |
| Eritrea | _ | No recent contact | | |
| Kuwait | Environment Public Authority – Living Resources Department | CITES COP13, Oct. 2004 | | |
| Qatar | _ | No recent contact | | |

| Saudi Arabia | Ministry of Agriculture – Fisheries Affairs Directorate; NCWCD | FAO COFI, March 2005; Briefing paper provided May 2003 | |
|----------------------|--|---|--|
| Sudan | Wildlife Conservation, General Administration | Director, Planning and Projects Development registered to attend SS3 (no sponsorship available) | |
| United Arab Emirates | ERWDA, Marine Environment Research Centre | Briefing paper provided Dec. 2004 | |
| Yemen | Environment Protection Authority | CBD SBSTTA, Feb 2005 – handed over comprehensive briefing pack | |
| Western Indian Ocean | | | |
| France | Ministry of Foreign Affairs, Environment Sub-direction; Ministry of Ecology | CBD SBSTTA, Feb 2005; Regular contact: Feb-Mar 2004 | |
| Mozambique | Centre for Sustainable Development of Coastal Zones | Attended IOSEA SS2 Director, registered to attend SS3 (no sponsorship available) | |
| Somalia | _ | No recent contact | |
