

Jordan

GENERAL INFORMATION

Agency or institution primarily responsible for the preparation of this report:

Faculty of Marine Sciences-Jordan University of Agaba and marine science station, Agaba-Jordan

Other agencies, institutions, or NGOs that have provided input:

Aqaba Marine Park Authority, Aqaba Special Zone Authority, Jordan society for the protection of marine turtles and Royal Society for Conservation of Marine Environment

Designated Focal Point:

Minister of Environment, Ministry of Environment P.O. Box 1408 Amman 11941 Jordan

Tel: +962 6 535 0149 Fax: +962 6 535 0084

Memorandum signed: 18 March 2004

Effective Date: 1 June 2004

This report was last updated: 6 December 2011

OBJECTIVE I. REDUCE DIRECT AND INDIRECT CAUSES OF MARINE TURTLE MORTALITY

1.1 Introduction to marine turtle populations and habitats, challenges and conservation efforts. [INF]

The population structure and distribution of sea turtles at thirteen diving sites were investigated along the coastline of the Jordanian Gulf of Aqaba. The foraging sea turtles at all diving spots were observed and recorded. Data collected over 13 diving locations during one year revealed that all captures as well as those observed in the field were Hawksbill turtles. The majority of the turtle population was at sub adult stage (45-60 cm CCL, curved carapace length). The Black Rock showed the highest abundance of turtles while Moon valley, Seven Sisters, and Oliver Canyon had the lowest abundance. The gender ratio of turtle population showed fluctuation throughout the year with males consistently more abundant between July and December. In Jan-Feb only females were seen. An overall estimation of the total number of both genders during the study period indicated that there are slightly more females than males. The majority of the turtle population (85%) was observed in the coral reef habitat.

It is believed that the turtle population in Jordan is present solely to forage in this area, and then migrate to Saudi Arabian or Egyptian coastlines or even farther for nesting. Rapid urbanization could have reduced nesting habitat at the Jordanian coast. The recently developed Jordan's National Action Plan for the Conservation of Marine Turtles provided actions for management activities, enforce legislation and securing funding for turtle conservation measures.

1.2.1 Describe any protocol or approaches practiced in your country, which you consider exemplary, for minimising threats to marine turtle populations and their habitats, which may be suitable for adaptation and adoption elsewhere. [BPR]

- 1) Daily beach patrolling by Agaba Marine Park rangers (AMP)
- 2) Daily sea patrolling to different fishing sites by AMP
- 3) Public awarness activities through direct communication with fishermen
- 4) Lectures to public on monthly basis at AMP lecture room
- 5) Through signs fixed along the beaches commonly used for public

The Jordan's national action plan (NAP) provides a set of priority actions for the conservation of marine turtles and their habitats in the Gulf of Aqaba. The main threats to the maintenance of stable turtle populations are now well understood. It range from opportunistic capture to global threats such fishing mortality and threats from pollution incidents. NAP addresses the primary causes of turtle mortality with a series of proposed actions. Actions include:

- a) reducing threats to turtle populations from commercial fisheries, land development operations, and human interference:
- b) regulating direct capture in turtles; and
- c) promoting turtle rescue and rehabilitation along with public awareness activities.

It is recognized however that reducing the threats to marine turtle populations alone will be insufficient to guarantee their survival. Hence NAP has considered a further set of recommendations. It include the importance of protecting turtle feeding habitat, research and monitoring, community participation in conservation activities, the capacity of national agencies to carry out the necessary management activities and to enforce legislation.

1.3.1 Describe any socio-economic studies or activities that have been conducted among communities that interact with marine turtles and their habitats. [BPR, INF]

Together with participation of local communities, NAP is now available for execution by governmental institutions and NGOs in Jordan. At the same time will keep coordinating our activities with other global initiatives for turtles conservation

1.3.2 Which of these adverse economic incentives are underlying threats to marine turtles in your country? [TSH]

☐ High prices earned from turtle products relative to other commodities
☐ Lack of affordable alternatives to turtle products
☐ Ease of access to the turtle resource (eg. by virtue of proximity or ease of land/water access)
Low cost of land near nesting beaches
■ Low penalties against illegal harvesting
■ Other1: Policies in relation to fishery resources management
■ Other2: Development projects along the coast that deal with tourism, ports and industry
■ Other3: Ship traffic and trade

The major threats to in water habitats in Jordan include industrial activities, fishing practices and other forms of marine pollution, including persistent marine debris

1.3.3 Has your country has taken any measures to try to correct these adverse economic incentives? [BPR]

■ YES NO NOT APPLICABLE (no adverse economic incentives exist)

Implementing Environment Impact Studies (EIA) for any project along the coast.

Enforcement of new legislation for marine conservation measures and fisheries which took effect two years ago.

Engagement of other official authorities such as Coast Guards on beach patrolling, as well as some NGOs.

Fishers were encouraged to join the Agaba Fishermen Society for better management of fisheries

1.4.1 Indicate, and describe in more detail, the main fisheries occurring in the waters of your country, as well as any high seas fisheries in which flag vessels of your country participate, that could possibly interact with marine turtles. [INF]
a) Shrimp trawls:
b) Set gill nets: ■ YES ¬ NO
It is the most commonly used method with artisan fishery. Almost all the 120 fishermen are using gillnets. They are operating about 60 small boats and utilizing mostly the entire coastal area that extends for about 27 km.
c) Anchored Fish Aggregating Devices (FADs): □ YES ■ NO
d) Purse seine (with or without FADs): □ YES ■ NO
e) Longline (shallow or deepset): ■ YES NO
Some fishermen utilize this method but at certain periods of the year - mainly during summer. Deep water is the preferred fishing area because of the limitation of coastal fishing grounds. Fishermen have recently started to utilize deep-sea fishing using this method.
f) Driftnet: YES ■ NO
g) Other1:
h) Other2:
☐ None of the above
1.4.2 Please indicate the relative level of fishing effort and perceived impact of each of the above fisheries on marine turtles (e.g. in terms of by-catch). [TSH]

1.4.3 Describe any illegal fishing that is known to occur in or around the waters of your country that may impact marine turtles. Describe the measures being taken to deal with this problem and any difficulties encountered in this regard. [TSH]
Since fisheries in Jordan is artisinal in nature, fishing gears are limited to the use of hook and line and gill nets. However, most of fishing activities are directed now to deep water. The use of cages has been banned completely on coastal water as well as construction of special pathways along the coast to be used for beach visitors and users.
1.4.4 Which of the following methods are used by your country to minimise incidental capture/mortality of marine turtles in fishing activities? [IND]
a) Appropriate handling of incidentally caught turtles (e.g. resuscitation or release by fishers using equipment such as de-hooking, line cutting tools and scoop nets)
□ YES □ NO ■ NOT APPLICABLE
b) Devices that allow the escape of marine turtles (e.g. turtle excluder devices (TEDs) or other measures that are comparable in effectiveness)
TYES TNO ■ NOT APPLICABLE
c) Measures to avoid encirclement of marine turtles in purse seine fisheries
▼YES NO NOT APPLICABLE
d) Appropriate combinations of hook design, type of bait, depth, gear specifications and fishing practices
TYES TNO ■ NOT APPLICABLE
e) Monitoring and recovery of fish aggregating devices (FADs)
TYES TNO ■ NOT APPLICABLE
f) Net retention and recycling schemes
TYES TNO ■ NOT APPLICABLE
g) Spatial and temporal control of fishing (e.g. seasonal closures of fishing activities)
TYES TNO ■ NOT APPLICABLE
h) Effort management control

1.6.2 Has your country undertaken any eva [SAP]	aluation of its nest and beach management programmes?
▼YES ■ NO ■ NOT APPLICABLE	
OBJECTIVE II. PROTECT, CONSE	RVE AND REHABILITATE MARINE TURTLE HABITATS
	cal habitats <i>outside</i> of established protected areas? (NB: It is blished protected areas will have been described in Section
2.1.2 Are assessments routinely made of to on marine turtles and their habitats? [IND,	the environmental impact of marine and coastal development SAP]
■ YES NO NOT APPLICABLE	
	a yearly monitoring program on water quality, benthos and fish fauna rogram was commenced before 10 years and still implemented under unian Sector of Gulf of Agaba

2.1.3 Is marine water quality (including marine debris) monitored near turtle habitats? If yes, describe the nature of this monitoring and any remedial measures that may have been taken. [SAP]
■ YES NO NOT APPLICABLE
Water quality is monthly monitored along the entire coast. All possible sources of pollution are strictly considered in the water quality assessment. Research on the water quality specially the microbial counts (coliformas and fecal coliforms) at certain locations has been conducted. In addition, investigation on fish diseases and parasites was also undertaken on fish stocks. Links between microbes and parasites that are of heteroxenous and monoxenous origin have been identified which could harm turtles population in the area.
2.1.4 Are measures in place to prohibit the use of poisonous chemicals and explosives? [SAP]
■ YES F NO NOT APPLICABLE
According to the existing laws and regulations in the country regarding the marine environment all means of the use of poisons or explosives in fishery are strictly prohibited. Measures are implemented through various agencies, marine park rangers, beach patrollers, coast guard forces, port authorities and certain NGOs.
2.2.1 Are efforts being made to recover degraded coral reefs? If yes, give details (location, duration, effectiveness, lessons learned, future plans etc). [IND, SAP]
■ YES NO NOT APPLICABLE (no degraded coral reefs)
Coral reef habitats are continuously monitored visually. Underwater cleaning campaign of solid wastes is often implemented. Recently, construction of settling substrata for the initiation of artificial reef habitat has been completed. The location is at the northern public beach. ASEZA with the help of PERSGA undertake this responsibly. In addition, trials were made to rehabilitate other sites by re-arranging the broken colonies of corals and/or re-transplanting them within the same location.
2.2.2 Are efforts being made to recover degraded mangrove habitats that are important for turtles? If yes, give details (location, duration, effectiveness, lessons learned, future plans etc.) [IND, SAP]
▼YES NO ■ NOT APPLICABLE (no mangrove habitats important for turtles)
There are no mangroves along the coast of Jordan. However, grass beds are under continuous observation. Areas that

witnessed heavy fishing efforts were impacted by such activities. Recently, complete ban of fishing was enforced five years ago. Recent observations suggest a good well-being of these habitats.

2.2.3 Are efforts being made to recover degraded sea grass habitats? If yes, give details (location, duration, effectiveness, lessons learned, future plans etc.). [IND, SAP]

■ YES NO NOT APPLICABLE (no degraded sea grass habitats)

However, debris removal is routinely made along the entire coast through the programs to keep beaches clean. Clean up campaigns are continuously undertaken either by Department of environment at ASEZA or by various NGOs

OBJECTIVE III. IMPROVE UNDERSTANDING OF MARINE TURTLE ECOLOGY AND POPULATIONS THROUGH RESEARCH, MONITORING AND INFORMATION EXCHANGE

3.1.1 Give a list of available literature that includes baseline information from studies carried out in your country on marine turtle populations and their habitats. [INF]

Through the Strategic Action Plan (SAP) implemented by PERSGA for the regional countries, we have started to collect some preliminary information on turtle stocks that live in or head to Jordan's territorial waters. Some information was gathered on the population size and kind. In addition, currently a program for tagging the by-catch of turtles is under way. A study on feeding habits of the Hawksbill turtle is being proposed and hopefully within a short period will be commenced.

3.1.2 Have long-term monitoring programmes (i.e. of at least 10 years duration) been initiated or planned for priority marine turtle populations frequenting the territory of your country? [IND, BPR]
■YES FNO FUNSURE
This has been suggested to the environment department of ASEZA in order to ask all diving centers in the city of Aqaba to continuously fill a special underwater sheet about each diver observation on turtle population. Volunteer divers locally and from outside the country have started to fill in this sheet and will continue on a sustainable manner.
3.1.3 Has the genetic identity of marine turtle populations in your country been characterised? [INF, PRI]
TYES ■ NO TUNSURE
3.1.4 Which of the following methods have been or are being used to try to identify migration routes of turtles? Use the text boxes to provide additional details. [INF, PRI]
Tagging ■ YES □ NO
With the help of local fishermen, a tagging program (Regional Organization for the Conservation of the Environment of the Red Sea and Gulf of Aden - PERSGA) was also implemented on animals found in their catch.
Satellite tracking
☐ Other
☐ None of the above
3.1.5 Have studies been carried out on marine turtle population dynamics and survival rates (e.g. including studies into the survival rates of incidentally caught and released turtles)? [INF, PRI]
■ YES FNO FUNSURE
The Black Rock showed the highest abundance of turtles, while Moon valley, Seven Sisters, and Oliver Canyon showed the lowest. Black Rock and Gorgon I are highly developed coral reef habitats while the other sites also contain grass beds and sandy bottoms. CPUE also showed higher values at sites with high abundance of turtles. However, the fluctuation in CPUE values between the different sites was a function of changes in the number of dives as well as divers during the survey period.
3.1.6 Has research been conducted on the frequency and pathology of diseases in marine turtles? [INF, PRI]
TYES ■ NO TUNSURE
3.1.7 Is the use of traditional ecological knowledge in research studies being promoted? [BPR, PRI]
□YES □NO ■UNSURE

3.2.1 List any regional or sub-regional action plans in which your country is already participating, which may serve the purpose of identifying priority research and monitoring needs. [INF]

A national action plan was prepared for Jordan with logistical support from PERSGA similar to the other seven countries of the Red Sea. Jordan's National Action Plan for the Conservation of Marine Turtles and their Habitats (NAP) addresses a number of key objectives and obligations to reduce threats to marine turtle populations. It considers the importance of protecting and conserving marine turtles and their feeding habitat, research and monitoring, community education and participation in conservation activities..

3.2.2	2 On	which	of 1	the follow	/ing	themes	hav	ve co	ollaborative	studi	ies and ı	monit	toring	g been	condu	cted? Use
the	text	boxes	to	describe	the	nature	of	this	internation	al co	llaborat	ion c	r to	clarify	your	response.
Ans۱	ver '	NO' if t	he:	studies/m	nonit	oring u	nde	rtake	en do not in	volve	interna	tiona	l coll	aborati	on. [II	NF, PRI]

a) Genetic Identity ■ YES 「NO 「NOT APPLICABLE

For gene flow studies, samples from turtle population in Jordan will be collected and incorporated with samples from other PERSGA regional countries for genetic analysis.

b) Conservation status ■ YES □ NO □ NOT APPLICABLE

Development of the NAP for each country of PERSGA has been launched, through which conservation measures between countries are in progress.

c) Migrations ■ YES □ NO □ NOT APPLICABLE

Tagging programe is under progrees for turtles population in the Red Sea and Gulf of Aden region in order to tags each individual turtle cought either through by-catch or any other means.

d) Other biological and ecological aspects ■ YES □ NO □ NOT APPLICABLE

Food and feeding habits mainly for the Hawksbill turtle. In addition, studies on the status of coral reef and sea grass habitats -- being major feeding grounds and important for development of turtles in the region.

■ Other

We are proposing to establish a marine turtle observatory through which trials will be made to examine adults' potential for artificial reproduction.

3.3.1 List, in order of priority, the marine turtle populations in your country in need of conservation actions, and indicate their population trends. [PRI]

Five species of marine turtles are found in the Red Sea, of which the Hawksbill turtle, Eretmochelys imbricata, are probably the most abundant in the area. Two major species are currently appearing in Jordan's waters (Hawksbill turtle and green) both of which need actions for conservation. The trend of such population indicates scarcity in their abundance over time. Efforts and being undertaken to attract others to the area.

3.3.2 Are research and monitoring activities, such as those described above in Section 3.1 periodically reviewed and evaluated for their efficacy? [SAP]

■ YES □ NO □ UNSURE

All forms of reports are continuously reviewed for further evaluation and development. Monitoring activities in particular are continuously evaluated and reviewed by the specialized staff at MSS. Modifications and comparisons between previous and the newly generated data are compared.

3.3.3 Describe how research results are being of threats (in relation to the priority population)			nd mitigation

■ Policy makers ☐ Fishing industry ■ Local/Fishing communities ☐ Indigenous groups ■ Tourists ☐ Media ■ Teachers			

	Students
	Military, Navy, Police
	Scientists
Γ	Other:
Г	None of the above

Workshops, presentations and interviews with all of the above through pre-organized programs.

4.1.3 Have any community learning / information centres been established in your country? [BPR, SAP]

■ YES NO

Aqaba Marine Park has been recently established. It belongs to the department of Environment at ASEZA. The Center is fully staffed with rangers on both marine and coastal areas. Their duty is to provide advice and guidence when needed to coast users as well as patrolling the entire coastal line againsed any envornmental violence.

4.2 Alternative livelihood opportunities [IND, BPR] Describe initiatives already undertaken or planned to identify and facilitate alternative livelihoods (including income-generating activities) for local communities.

This has been focused on fishermen communities through the engagement of some of them to become rangers at ASEZA for coastal areas and boat observers. In addition, some fishermen have been incorporated in other jobs at the marine park or other departments of ASEZA as an alternative for their incomes.

Ecotourism groups were also established recently and employed by some of the new resorts along the coast. Duties are to guide divers to sites of attraction as well as provide details on the beauty and the importance of conserving the marine environment.

4.3.1 Describe initiatives already undertaken or planned by your country to involve local communities, in particular, in the planning and implementation of marine turtle conservation programmes. Please include details of any incentives that have been used to encourage public participation, and indicate their efficacy. [BPR, IND]

Beach clean up and underwater cleaning campaigns.

Private diving centers are encouraged to collect data on turtles.

Various NGO activities, such as social events, are directed at environmental conservation issues.

Exposing the historical and heritage importance of Agaba town through organizing yearly festival.

4.3.2 Describe initiatives already undertaken or planned to involve and encourage the cooperation of Government institutions, NGOs and the private sector in marine turtle conservation programmes. [IND, BPR]

Public acknowledgement and certificates. In addition, during major events related to marine environmental protection; hats, medals and T-shirts are distributed to the public. However, incentives devoted especially for turtle conservation are under evaluation and hopefully will result in something that might help in this direction.

OBJECTIVE V. ENHANCE NATIONAL, REGIONAL AND INTERNATIONAL COOPERATION

5.1.1 Has your country undertaken a national review of its compliance with Convention on International Trade in Endangered Species (CITES) obligations in relation to marine turtles? [SAP]

	VEC		\Box	NOT	۸DDI	ICABI	F
_	YES	1 1/1()		131() 1	APPI	II.ABI	г

As a member state of CITES, Jordan is complying all items of the agreement accordingly in a strict manner. Trade in live turtles or turtle products is strictly prohibited.

5.1.2 Does your country have, or participate/cooperate in, CITES training programmes for relevant authorities? [SAP]						
TYES ■ NO T NOT APPLICABLE						
5.1.3 Does your country have in place mechanisms to identify international illegal trade routes (for marine turtle products etc.)? Please use the text box to elaborate on how your country is cooperating with other States to prevent/deter/eliminate illegal trade. [SAP]						
TYES TNO ■ NOT APPLICABLE						
5.1.4 Which international compliance and trade issues related to marine turtles has your country raised for discussion (e.g. through the IOSEA MoU Secretariat, at meetings of Signatory States etc.)? [INF]						
5.1.5 Describe measures in place to prevent, deter and eliminate domestic illegal trade in marine turtle products, particularly with a view to enforcing the legislation identified in Section 1.5.1. [INF]						
The existing legislation clearly demonstrates that it is illegal to trade in most of the marine organisms which are scarcely available at the Jordanian coast. This certainly includes alive or dead coral colonies, coloured coral fish and many other invertebrates for ornamental use such as Giant clams, anemones and sponges in addition to marine turtles and marine mammals.						
5.2.1 Has your country already developed a national action plan or a set of key management measures that could eventually serve as a basis for a more specific action plan at a national level? [IND]						
■YES FNO						
NAP is already sent to officials at the ministry of environment. Coordination of activity between the ministry and ASEZA is being initiated with the hope that ASEZA will take the lead to implement the NAP in collaboration with other authorities in the town as well as the NGO's.						
ASEZA is being initiated with the hope that ASEZA will take the lead to implement the NAP in collaboration with other

ASEZA is being initiated with the hope that ASEZA will take the lead to implement the NAP in collaboration with other authorities in the town as well as the NGO's. 5.2.2 From your country's perspective, which conservation and management activities, and/or which particular sites or locations, ought to be among the highest priorities for action? [PRI] Provide reliable and accurate data on the population size. Data were generated and under continuous monitoring (3.1) Rehabilitation of habitats.; At all habitats, fishing was banned completely. Fishing is allowed only at deep water mainly using hooks and line. (2.2) Public awareness. Eco clubs at several schools and NGO's were established. Their duties are to conduct events on marine conservation issues and one of them is devoted for turtles conservation. (4.1) Turtles ecotourism; eco tourism groups were created to serve in the mission of helping tourists at sites of interest (6.3) 5.2.3 Please indicate, from your country's standpoint, the extent to which the following local management issues require international cooperation in order to to achieve progress. [PRI]						

Hunting/harvest by neighboring countries	□ ESSENTIAL ■ IMPORTANT □ LIMITED □ NOT AT ALL
Poaching, illegal trade in turtle projects	□ ESSENTIAL □ IMPORTANT □ LIMITED □ NOT AT ALL

Maintain sustainability of marine resources	and indicate the importance of marine habitats between cour

Maintain sustainability of marine resources and indicate the importance of marine habitats between countries. Migratory species, such as turtles, do not recognize the political boundaries between countries.

Monitoring of water quality against pollution.

Early warning on oil spillage between neighboring countries.

Communication and smooth flow of environmental information is essential.

5.3.1 Identify existing frameworks/organisations that are, or could be, useful mechanisms for cooperating in marine turtle conservation at the sub-regional level. Please comment on the strengths of these instruments, their capacity to take on a broader coordinating role, and any efforts your country has made to enhance their role in turtle conservation. [INF, BPR]

The regional action plan (RAP) for marine turtles in the regional countries of the Red sea and Gulf of Aden is useful tool to strengthen cooperation. Although, Egypt and Saudi Arabia are part of this RAP, any real cooperation between these countries and Jordan is still in its infancy stage.

5.3.2 Has your country developed, or is it participating in, any networks for cooperative management of shared turtle populations? [BPR, INF]

- 5.3.3 What steps has your country taken to encourage Regional Fishery Bodies (RFBs) to adopt marine turtle conservation measures within Exclusive Economic Zones (EEZs) and on the high seas? [SAP]
- 5.4.1 Describe your country's needs, in terms of human resources, knowledge and facilities, in order to build capacity to strengthen marine turtle conservation measures. [PRI]

Rangers and coast patrollers in addition to coast guard forces are well oriented for the protection of the marine environment in general. However, people who have received special training in marine turtle conservation are increasing. MSS is the only research center for marine sciences in the country and is capable of conducting basic studies on turtle populations including tagging and habitat assessment. Preliminary study is already available but due to the rarity of turtles and limited coastal line the need for extensive work is still under debate.

In terms of knowledge, experts at MSS are mainly oriented to studies in the field of fisheries and oceanography. Therefore, generalized knowledge through contribution in various workshops is available but there is an obvious need to improve such knowledge.

5.4.2 Describe any training provided in marine turtle conservation and management techniques (e.g. workshops held, training manuals produced etc.), and indicate your plans for the coming year. [PRI, INF]

- 1- Workshop on marine turtle conservation in the western Indian ocean, 18-22 Nov. 2000, United Arab Emirates
- 2- Workshop on regional action plan for the conservation of marine turtles and their habitats in the Red Sea and Gulf of Aden, PERSGA, 29-30/9/2003 Saudi Arabia
- 3- Two rangers from Aqaba attended the training course organized by PERSGA in Yemen in 2002
- 4- Manual and data sheets describing survey methods on marine turtles
- 5- Set of metallic tags prepared and supplied by PERSGA
- 6- Field measuring devices for length and weight of marine turtles
- 7- Eco club at schools provide extensive number of lectures at schools of different levels.

5.4.3 Specifically in relation to capacity-building, describe any partnerships developed or planned with universities, research institutions, training bodies and other relevant organisations. [BPR]

ASEZA with its relevant staff for environmental and conservation issues are being coordinated with Marine Science Station in Aqaba. Experts in different fields of marine sciences are contributing to research and knowledge provision for the students and ASEZA staff. The experts are also cooperating with several NGOs in Aqaba region and with other universities in the country.

PERSGA contributed in the capacity building. Jordan participated in all training courses held by PERSGA who also provide special tags to help in turtle monitoring and conservation.

- 5.5.1 National policies and laws concerning the conservation of marine turtles and their habitats will have been described in Section 1.5.1. Please indicate their effectiveness, in terms of their practical application and enforcement. [SAP, TSH]
- 5.5.2 Has your country conducted a review of policies and laws to address any gaps, inconsistencies or impediments in relation to marine turtle conservation? If not, indicate any obstacles encountered in this regard and when this review is expected to be done. [SAP]

I believe ASEZA and the ministry of environment are now working to review the overall regulation concerning marine environmental protection and among these there will be items especially devoted for endangered species of which turtles are part.

5.5.3 From the standpoint of law enforcement, has your country experienced any difficulties achieving cooperation to ensure compatible application of laws across and between jurisdictions? [TSH]

□YES □NO □UNSURE

OBJECTIVE VI. PROMOTE IMPLEMENTATION OF THE MoU INCLUDING THE CONSERVATION AND MANAGEMENT PLAN

6.1.1 What has your country already done, or will it do, to encourage other States to sign the IOSEA MoU? [INF]

6.1.2 Is your country currently favourable, in principle, to amending the MoU to make it a legally binding instrument? [INF]

■ YES F NO F NO VIEW

6.1.3 Would your country be favourable, over a longer time horizon, to amending the MoU to make it a legally-binding instrument? [INF]
■ YES FNO NO VIEW
Strengthen the link with all of its instruments regarding turtle protection measures.
6.2 Secretariat and Advisory Committee
6.2.1 What efforts has your country made, or can it make, to secure funding to support the core operations of the IOSEA MoU (Secretariat and Advisory Committee, and related activities)? [IND]
Not yet discussed
6.3.1 What funding has your country mobilised for domestic implementation of marine turtle conservation activities related to the IOSEA Marine Turtle MoU? Where possible, indicate the specific monetary values attached to these activities/programmes, as well as future plans. [IND]
6.3.2 Has your country tried to solicit funds from, or seek partnerships with, other Governments, major donor organisations, industry, private sector, foundations or NGOs for marine turtle conservation activities? [IND]
⊤ YES ■ NO
6.3.3 Describe any initiatives made to explore the use of economic instruments for the conservation of marine turtles and their habitats. [BPR]
6.4.1 Has your country designated a lead agency responsible for coordinating national marine turtle conservation and management policy? If not, when is this information expected to be communicated to the IOSEA MoU Secretariat? [IND]
□YES ■ NO
Discussions are in process among ASEZA, MSS, Ministry of Environment and some NGOs to develop initiatives in this direction. Generally, ASEZA will be the lead agency in this regard after implementing the NAP of Jordan
6.4.2 Are the roles and responsibilities of all government agencies related to the conservation and management of marine turtles and their habitats clearly defined? [IND]
■ YES FNO FUNSURE
The Jordanian coast is limited to the northern most portion of Gulf Aqaba. Responsibilities are mainly restricted to the ASEZA departments. All these responsibilities are well coordinated with other government agencies such as the Ministry of Environment and the Ministry of Agriculture and coast guard forces.
6.4.3 Has your country ever conducted a review of agency roles and responsibilities? If so, when, and what was the general outcome? If not, is such a review planned and when? [SAP],
□ YES ■ NO □ UNSURE
