

Families **Anatidae** and **Charadriidae** are listed in CMS **Appendix II** at the level of family, i.e. all species within these families are included in CMS Appendix II.

The following table indicates the change in the number of species listed in case of the adoption of a new taxonomic reference, reflecting the different hierarchy of taxonomic ranks of the actual reference (Sibley & Monroe), the proposed one (Dickinson), and the Handbook of the Birds of the World (Wetlands International reference)
