GLOBAL WEBINAR

Socio-Ecological Connectivity: Bridging Land Restoration, Biodiversity Conservation and Climate Action

Land degradation, desertification and fragmentation are accelerating, and ecological connectivity is a critical foundation for resilience in the face of these challenges. The Global Land Outlook (GLO) Thematic Report on Ecological Connectivity, launched at the IUCN World Conservation Congress in 2025, demonstrates how restoring degraded lands, managing multifunctional landscapes, and addressing fragmentation can simultaneously advance land, biodiversity, climate, and sustainable development goals.

This webinar will explore the GLO's key messages, connect them to on-the-ground examples and global initiatives, and highlight how global policies can benefit from and reinforce this integrated perspective.
