

Annex A: TAG suggestions for Signatory consideration re: potential additions to Table 3 list of internationally important sites for migratory birds of prey in Africa and Eurasia

Summary: Between MOS3 and MOS4 TAG compiled a list of additional sites reported to support internationally important numbers of Annex 1 species across the geographic area of the MOU but not currently listed on Table 3 and new qualifying populations at existing Table 3 sites. For more information see Sites rationale document to MOS4. Note that this was an automated analysis to output relevant data within the MOU area for Signatory consideration, so does not take account of any historic or ongoing processes for Table 3 improvement specific to individual countries. These data also vary in year of assessment, so require Signatory review. The annexes are therefore offered by TAG as an input to national discussions on Table 3.

Country order: Sites are ordered alphabetically by region: Africa, Asia, Central Asia, Europe, Middle East and within each region, alphabetically by country.

Geographic coordinates are not provided in this publicly available document for sites supporting certain sensitive species, but please contact the Raptors MOU Coordination Unit if you need this information.

For further information on sites listed in Annex A see:

Steppe Eagle Global Action Plan <https://raptors.cms.int/steppe-eagle-global-action-plan>

Important Bird and Biodiversity Areas (IBAs) see <https://datazone.birdlife.org/search>. NB/ Some data for sensitive species at sites may be unavailable publicly.

Key Biodiversity Areas (KBAs) see <https://www.keybiodiversityareas.org/en/sites>. NB/ Some data for sensitive species at sites may be unavailable publicly.

For IBA/ KBA information Signatories may wish to consult with the BirdLife International Partner for their country on Table 3 update (<https://www.birdlife.org/regions-and-partners/>)

Europe	Portugal		Serra do Mendro (Vidigueira/Portel)			Aegypius monachus	Cinereous Vulture	Breeding	Expert identified Internationally important site for Annex 1 spp not on Table 3	Expert	From Vulture Conservation Foundation: 11-13 breeding pairs in 2026; 17 nests found. Area used regularly by many Cinereous vultures and Griffon vultures to roost. Colony found in 2024, breeding monitoring conducted in 2025 and 2026. Type of observation: breeding monitoring/surveys - direct observation. 4 juvenile birds have been fitted with GPS tags in 2025 and 2026. There is tracking evidence the area is used by many Cinereous vultures birds tagged in other breeding colonies in Portugal (at least ~40 tagged birds have visited/roosted in the area), as well as by Griffon vultures tagged in different colonies in Spain (~20 tagged birds confirmed to use roost the area). range: Breeding
